SUPERVISED BY

BILAL MUHAMMAD IQBAL

BAHRIA UNIVERSITY (KARACHI CAMPUS)

May 2017

ACKNOWLEDGEMENTS

We would like to thank everyone who had contributed to the successful completion of this project. We would like to express my gratitude to my research supervisor, Bilal Muhammad Iqbal for his invaluable advice, guidance and his enormous patience throughout the development of the research.

In addition, we would also like to express my gratitude to our loving parent and friends who had helped and given me encouragement.

BAHRIA SMART CAR PARKING MANAGEMENT SYSTEM

ABSTRACT

The main objective of our project is to create and develop a system which will guide drivers in parking via android application. This report consists of different stages of chapters involving Problem that drivers face during parking and their solutions. Hence, this project proposes the smart parking system using wireless sensor network based on Arduino Uno.

The aim of this project is to atomize the car park for allowing the cars into the park. LCD is provided to display the information about the total number of cars that can be parked and the place free for parking. RFID reader is used in this project to identify the entry or exit of the cars. Whenever the main are switched on, the LCD displays the message parking space for 4 vehicles. Whenever a car comes in front of the sensor, they will then send signal to the microcontroller but in case if they get disturbed and the microcontroller will display the result of available slots on LCD. This project uses WSN technology which has a great potential towards providing an easy and cost effective solution to this credible application for various reasons. Ease of deployment in existing parking lots without excavation and expensive cable installations has increased our attention towards wireless sensor network technology.

As conclusion, this project will help reduce traffic jams and improper parking in the parking spaces in the future.

CHAPTER

1	INTRODUCTION	1-5
	1.1 Background	1
	1.1.1 Existing system	2
	1.1.2 Problem in Existing System	2
	1.2 Problem Statements	3
	1.2.1 No Identification of User	3
	1.2.2 Traffic jam pack in parking area	3
	1.2.3 No Proper log	3
	1.2.4 No Billing mechanism	3
	1.3 Aims and Objectives	3
	1.4 Outcome	4
	1.5 Benefits	5

2	LITERATURE REVIEW	6-11
2.1	Review of related work	6
2.2	Existing system	6
2.2.1	Hybrid Approach	6
2.2.2	D-System Project	7
2.2.3	Jatuporn et al	7
2.2.4	Iris-Net	8
2.3	Some Parking System Technologies	8
2.3.1	Camera-based sensor technology	8
2.3.2	Infrared sensor technology	9
2.3.2	Ultrasonic sensor technology	9
2.3.4	Ultrasonic sensor technology and LED Hyper-star Karachi	10
3	DESIGN AND METHODOLOGY	12-26
3.1	Project Methodology	11
3.2	Design Constants	13
3.3	Hardware Requirements	14
3.4	Software Requirements	14
3.5	Modules	15
3.5.1	Connectivity	15
3.5.2	Database	16
3.5.1	Android Studio version	16
3.6	End user Characteristics	16
3.7	Architecture Strategies	17
3.7.1	RFID Detection	17
3.7.2	Steps of RFID registration	18
3.8	Parking slot Algorithm	19
3.8.1	Steps of Parking slot Algorithm	19
3.9	Entity Relationship Diagram	20
3.9.1	First NF	20
3.9.2	Second NF	21
3.9.3	3rd NF	22

3.10	Entities	23
3.11	Graphics User Interface Designing	24
4	IMPLEMENTATION	27-33
4.1	Phases of Implementation	27
4.1.1	Panel Phase	27
4.2	The Splash Screen	28
4.3	The Sign Page	29
4.4	The Sign Up Page	30
4.5	The Status Checking Page	31
4.6	The Side Page	32
4.7	The Embedded Sensor	33
5	Testing	34-36
5.1	Testing Strategies	34
5.2	Test Cases	35
6	Conclusion and Recommendation	37-38
6.1	Conclusion	37
6.2	Future Work and Recommendation	38
