## ABSTRACT

The purpose of this project is to better understand the portfolio designing and how portfolio designing helps the investor in maximizing the return and minimizing the risk, so that investor can make investing decisions based on the performance of stocks not all the stocks performs good some has good performance and some has bad so investing decision should be based on performance of stocks.

In order to design the portfolio, 100,000 is invested in portfolio but the point is how much to invest in each stock for this different technique are used like risk, return, variance coefficient of variation, correlation, beta, portfolio return, beta, risk and efficient frontier. The main purpose of this report is to make investment on the basis of results because not all stocks performs well some stocks performs good and some stocks performs bad so it is not necessary to make equal investment in portfolio rather investment should be made on the basis of performance.

In order to apply above mentioned techniques, historical data of ten stocks were taken from 1<sup>st</sup> march 2020 to 1<sup>st</sup> June 2020 from Karachi stock exchange, stocks include FEROZ, CHCC, EPCL, EFERT, SAZEW, HCAR, MUGHAL, NETSOL, MLCF, GUNL all of these stocks are taken from different sectors to make diversification in portfolio.

## TABLE OF CONTENT

CHAPTER 1	1
Introduction	1
CHAPTER 2	3
Problem statement:	3
CHAPTER 3	4
Design and implementation	4
Design	4
Time harizan	4
Data collection	4
Variables	
Sample Size	5
CHAPTER 4	
Methadology	ε
Analysis	
Return:	6
Risk & variance	10
Coefficient of variation:	13
Correlation:	1616
Portfolio risk, beta, coefficient of variation, market alignment, diversitication	index:2020
CHAPTER 5	30
CONCLUSION AND RECOMMENDATION	30
