Supervisor: Sir Sajjad Hussain Shah

Department of Computer Science  
Bahria University, Islamabad

January 7, 2021

# Abstract

Effective technical support and management is required for success of large scale projects. PMO is a management tool which provides scheduling and monitoring capabilities. However there are many tasks which can be performed by human beings but there should be a tool that can support these tasks so for that we are developing this management tool. The main tasks that Management Tool supports are Progress View, Work Packages, Meeting Management, Agile Boards, Attribute Highlighting, Full Text Search for work packages attachments, multi-select custom fields, List View Projects, Portfolios.

Progress generation is supported using knowledge base consisting of activities and constituent relationship between activities in domain of project. This will show progress of project, we can check whether a project is on track or off track or whether it is at risk. It gives a clear view of incomplete, complete or overdue tasks. We will set a status reminder and can update the project status. Work package captures significant information & that information will be assigned to project members for execution these packages includes tasks, risks, user stories, features, bugs and change requests. Timeline will show project and task deadlines to help us to plan our work in a better way. We can see schedules & hit deadlines. Meeting Management module is responsible to manage & document our project meetings at one place. We can prepare a agenda with our team, create document & share meeting time our meeting attendees at one place & that will be a central place for all. Project Management Tool makes time tracking process easy. In agile boards we can provide stories, prioritize a sprint backlog & track tasks. Using attribute highlighting we can highlight the work package status, priority & finish data that is based on their values. Status will be highlighted and prioritize it using custom colors. It will highlight work package rows based on chosen priority. If any project is completed then the finished date will be highlighted automatically. Over due dates will be highlighted in red and those task which are due on current day will be highlighted in orange color. Using full text search we can quickly find work package attachments either searched by their content or its file name which saves our time & effort. Using multi custom fields we can create our own custom attributes this will allow us to set and filter for multiple values at once. List view module will display a list of all project tasks that are completed or in process. Portfolios provides a view of all our significant projects in one place.

# Table of Contents

- Introduction ..... 11
  - 1. Motivation 11
  - 2. Project Background ..... 11
  - 3. Problem Statement ..... 11
  - 4. Objectives 12
  - 5. Scope 12
- Literature Review..... 13
  - 1. Project Management Tools..... 13
    - 1.1 Open Project**..... 13
    - 1.2 Jira**..... 13
  - 2. Limitations of current Tools..... 14
    - 2.1 Open project** ..... 14
    - 2.2 Jira** ..... 14
    - 2.3 Asana** ..... 14
    - 2.4 Proposed Solution to Problem**..... 14
    - 2.5 How is it different from the current Project Management Tools** ..... 14
  - 3. Advantages of PMO ..... 15
- Requirement Specifications ..... 16
  - Interface Requirement..... 16
    - 3.1.1 Hardware Requirements** ..... 17
    - 3.1.2 Software Requirements**..... 17
  - 3.2 Functional Requirements..... 18
    - 3.2.1 Sign-up** ..... 18
    - 3.2.2 Login**..... 18
    - 3.2.3 Agile Boards**..... 18
    - 3.2.4 Attribute Highlighting** ..... 18
    - 3.2.5 Full Text Search for work packages attachments: ..... Error! Bookmark not defined.**
    - 3.2.6 Multi select Custom Fields** ..... 18
    - 3.2.7 List View Projects**..... 18
    - 3.2.8 View Projects** ..... 18
    - 3.2.9 Add Tasks**..... 18
    - 3.2.10 Chats**..... 18
    - 3.2.11 Notifications** ..... 19
  - 3.3 Non Functional Requirements..... 19
    - 3.3.1 Reliability** ..... 19
    - 3.3.2 Security**..... 19
  - 3.4 Database Requirements ..... 19

3.5 Use Case Diagrams .....	20
<b>3.5.1 Individual Use Case</b> .....	20
<b>3.5.2 System Use Case</b> .....	31
<b>Design</b> .....	32
4.1 System Architecture.....	32
4.2 Design Approach.....	32
4.3 Design Constraints .....	33
4.4 Design Methodology .....	33
4.5 High Level Design .....	34
4.6 Low Level Design.....	38
4.7 Database Design.....	39
4.8 Libraries       40	
4.9 Methodology   41	
4.10 Class Diagram 41	
4.11 Entity Relationship Diagram .....	42
42	
4.12 Sequence Diagram.....	43
<b>System Implementation</b> .....	47
1.1 System Architecture.....	47
1.2 Tools and Technology Used.....	47
<b>1.2.1 Visual Studio Code</b> .....	47
<b>1.2.2 MongoDB Compass</b> .....	47
1.3 Development Environment/ Languages Used.....	47
<b>1.3.1 Angular JS</b> .....	47
<b>1.3.2 Node.JS</b> .....	48
<b>System Testing and Evaluation</b> .....	49
6.1 Test Strategies 49	
<b>6.1.1 Unit Testing</b> .....	49
<b>6.1.2 Component Testing</b> .....	49
<b>6.1.3 Integrated Testing</b> .....	49
<b>6.1.4 System Testing</b> .....	49
6.2 Test Cases       50	
• Test Case: Login .....	50
• Test Case: Register.....	50
• Test Case: Add New Project .....	51
• Test Case: Add New Task.....	51
• Test Case: Edit Project .....	52
• Test Case: Delete Project .....	52
• Test Case: Forgot Password .....	52

- Test Case: Teams Setting ..... 53
- Test Case: Personal Settings ..... 53

Conclusions 54

7.1 Conclusion 54

7.2 Future Scope 54
