Abstract

In the world of advanced technology, getting hands-on quick and on-the-go information has become an essential part of our lives. Tourism is the favourite hobby of netizens and requires updated information about tourist places. SAFAR - E - PAKISTAN is a smartphone application that has been designed and developed keeping in view the needs of the general public and travellers. The main focus is real-time data sharing that allows users to share media files such as photos and videos with other users of the app. All the data shared through this app has been set as public and can be viewed by anyone. To promote tourism in Pakistan, the application can play a vital role as it minimises the hassle of travelling by providing the latest information on tourist spots.
