Department of Computer Engineering

Bahria University, Karachi Campus

Submission Performa

Name (1) Laraib Shakeel
(2) Syeda Sanabel
(3) Muhammad Imran

Address (1) Buffer zone 15 a/5 R-523 North Nazimbad
(2) 2/74 big plot shah Faisal
(3) PIB colony plot 982

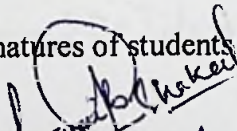

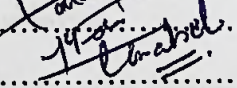

Title: Wearable Smart Device for Visually Impaired People

Project Supervisor's Name: Engr. Naveera Sami

This report is submitted as required for the Project in accordance with the rules laid down by the Bahria University as part of the requirements for the award of the degree of Bachelor of Engineering. I/We declare that the work presented in this report is my/our own except where due reference or acknowledgement is given to the work of others.

Acknowledgments

With a deep sense and profound gratitude, we take this opportunity to convey our sincere thanks to Almighty ALLAH for giving us the strength and audacity to reach this stage of life. Next to him are our parents, whom we are greatly indebted for bringing us up with love. We also appreciate our parent's efforts and their endless moral support they provided us at every step.

Firstly, we extend our thanks to our Project Manager; Engr. Huma Tabassum for being there for us in every step of building Wearable Smart Device for Visually Impaired People and guiding us in the most difficult times. We would have genuine pleasure to furthermore express deep sense of thanks and gratitude to our Head of Department; Dr. Rizwan Iqbal for encouraging us to do better every time.

In the last, we would like to take this opportunity to express a deep sense of gratitude for our Final Year Project supervisor; Engr. Naveera Sami, for her cordial support, exemplary guidance, monitory and constant encouragement. Whenever we needed help, she was there to help us. We are obliged to our batch fellows and parents for their valuable guidance and co-operation during the period of this task. Their blessings, help and guidance was a deep inspiration to us.

Abstract

The aim behind our project is to facilitate the visually impaired people through our Wearable Smart Device that would assist the visually impaired people by avoiding any type of obstacles in their path so they can move more freely. It will permit the blind people to explore new environment, more securely and independently. There are various technologies that increase the independency of visually impaired people life, but these technologies and other assistive devices are still lacking in certain areas. This wearable smart device will sense any obstacles in their path, detect the objects, table, chairs, and door, detect stairs and will send feedback through proper voice command. Normally blind people traditionally used white cane, stick for traveling but some time they feel awkward they need light weighted portable device so they easily carry anywhere so we want to enhance the functionality as well as increased the accuracy. Our device will ensure the blind person safety and security.

Here an effort has been made to develop a smart wearable device using raspberry pi for obstacle detection using IR sensor alert through voice indication via handsfree, GPS and ESP for real-time location tracking, in order to tracked the location Blind assistant App has been developed, used Pi camera for object recognition like table, chairs, stairs, door. The objective is to create a device which helps the visually impaired people to easily move in the environment.

Keywords: Obstacle Detection, Object Recognition, Location Tracking, Mobile Application

Table of Contents

1. INTRODUCTION	1
1.1 COMPLEX ENGINEERING PROBLEM STATEMENT.....	2
1.2 PREVIOUS TECHNOLOGY.....	3
1.3 PROJECT SCOPE.....	5
1.4 PROJECT OBJECTIVE.....	6
1.5 REPORT STRUCTURE.....	6
2. BACKGROUND AND LITERATURE REVIEW	7
3. SYSTEM ANALYSIS	10
3.1 WORK BREAKDOWN STRUCTURE.....	10
3.2 LOGICAL DIAGRAM.....	11
3.3 HARDWARE DESCRIPTION.....	12
3.4 SOFTWARE DESCRIPTION.....	13
3.5 PROJECT METHODOLOGY.....	14
3.6 WORKFLOW.....	15
3.7 PROJECT GANTT CHART.....	16
3.8 PROJECT HARDWARE REQUIREMENTS.....	17
3.8.1 <i>Raspberry Pi (B+)</i>	17
3.8.2 <i>NodeMCU ESP module</i>	18
3.8.3 <i>IR Sensor</i>	19
3.8.4 <i>GPS (Global Positioning System) module</i>	19
3.8.5 <i>Camera</i>	20
3.8.6 <i>HDMI cable</i>	20
3.9 SOFTWARE REQUIREMENTS.....	21
3.10 USER REQUIREMENT LIST.....	22
4. SYSTEM DESIGN	23
4.1 USE CASE DIAGRAM.....	23
4.2 SYSTEM ARCHITECTURE.....	24
4.3 CONTEXT DIAGRAM.....	25
4.4 SEQUENCE DIAGRAM.....	26
4.5 CLASS DIAGRAM.....	27
4.6 SWOT ANALYSIS OF SYSTEM.....	28
4.7 PROJECT MANAGEMENT STRATEGIES.....	28
4.7.1 <i>Group Members Contribution</i>	29
4.8 PERFORMANCE DIAGRAM.....	29
4.9 CHARACTERISTICS OF THE USER.....	30
5. IMPLEMENTATION	31
5.1 INTERFACING RASPBERRY PI WITH IR SENSOR.....	31
5.1.1 <i>IR sensor Functionality Description</i>	32
5.1.2 <i>IR sensor Implementation cod</i>	32
5.2 ESP MODULE 8266 INTERFACING WITH GPS.....	33

5.3	ESP MODULE IMPLEMENTATION CODE	33
5.4	MOBILE APPLICATION USER INTERFACE	36
5.5	OBJECT DETECTION THROUGH RASPBERRY PI.....	37
5.5.1	<i>Object Recognition Dataset sample</i>	38
5.5.2	<i>Object Recognition Implementation code</i>	39
6.	TESTING.....	41
6.1	OVERALL TESTING APPROACH	41
