# Abstract

The busy schedule of the coordinators, students and csp coordinators makes it difficult for them to personally contact each other and get the queries solved and acquire related content. In universities, internship coordinators, csp coordinators, and students should have an online system or platform to interact with each other. In this emerging technological world, the users need a web service where they can engage and discuss with each other, which will allow them to save their time and energy. It is challenging for csp coordinators, internship coordinators and students to keep track of all the activities from different resources. Instead, they get the opportunity to have it all available on one website. This website provides the csp coordinators, internship coordinators and students with the ability to use it respectively. This website is made for csp coordinators, internship coordinators, and students. The csp coordinator can create his profile, upload csp documents, upload csp opportunities, respond to student queries, and add students. The internship coordinator can create his profile, add internship opportunities, add students, respond to student queries and search students with respective queries. Students can submit csp and internship documents. Students can ask queries related to internships and csp. This system is equally beneficial for csp coordinators, internship coordinators, and students, and it will help Bahria University have its web-based system rather than relying on third-party apps like Whatsapp and Gmail etc.
