# Abstract

We talk about mobile applications that make our lives easier and more manageable than ever. The standards of what is considered a well-designed mobile application have been raised and a heavy enterprise application can seriously delay an organization's productivity. The main objective of our application is to link users with salons and other local beauticians. This will help users to acquire services like hairstyle, makeup, skin, and body care, styling etc. TBS will help users in many ways. It would help saving a user's time to generate or gain profit, it is not necessary to increase prices at which customers may be able to avail the service.
