ACKNOWLEDGEMENT

From the deepest of my heart, I would like to thank Almighty ALLAH for the unconditional love He has shown me throughout my life and strength He has provided me to cope with any challenges that come across in my life. I would like to thank and appreciate the effort of my supervisor, Mr. Abdullah Hafeez, who has shown his devotional commitment towards the accomplishment of this dissertation. His professional guidance, overwhelming attitude and irresistible support has made this dissertation a possibility within limited span of time allowed. I would like to thank my family as I am very grateful for their love and support through every thick and thin phase of my life. My family has been the prime reason behind the success and achievements that I have in my master's degree. I owe a great debt of gratitude to my parents for their continuous support and for being my motivation throughout my life. I would like to appreciate the supporting effort of my graduate friends who has helped me a lot throughout my graduate degree.

ABSTRACT

This study has focused mainly on investigating the impact of taxpayers' perceptions on tax compliance with moderating effect of adoption of e-tax system in Pakistan. This study has considered fairness perception, tax knowledge, and tax complexity as independent variables, adoption of e-tax system as moderating variable, and tax compliance as dependent variable. In addition, this study has finalized taxpayers (salaried persons) of twin cities of Pakistan to investigate the relationship between variables mentioned above. To prove this relationship, a survey has been conducted through an adopted structured questionnaire regarding this literature, in which taxpayers (salaried persons) of twin cities of Pakistan have been requested to share their experiences by filling the questionnaires. To identify the results on data gathered from the respondents, statistical instruments have been used. Some of the statistical instruments used in this study includes descriptive frequencies, descriptive statistics, reliability, correlation, and regression analysis. Results derived through statistical instruments with the help of SPSS software have shown that there exists a significant positive relationship between fairness perception and tax compliance. Whereas, it has also been proved that adoption of e-tax system insignificantly moderates the relationship between taxpayers' perceptions (fairness perception, tax knowledge, and tax complexity) and tax compliance in Pakistan. However, tax knowledge and tax complexity does not have a significant positive impact on tax compliance in Pakistan.

Key Words: Taxpayer Perception, Fairness Perception, Tax Knowledge, Tax Complexity, Adoption of E-Tax System, Tax Compliance, etc.
