

**Reservoir characteristics of Lumshiwal and Kawagarh
Formations along Abbottabad Nathiagali Road, District
Abbottabad, Pakistan**

Shahid Ali and Mohsin Mujtaba

Department of Earth and Environmental Sciences

Bahria University Islamabad

Acknowledgments

Thanks to Allah (Almighty), the source of all knowledge, wisdom within and beyond our comprehension who enabled us to complete this work.

We wish to express our sincere and deep sense of gratitude to our supervisor, Mr. Mohammad Riaz, Assist Professor National Centre of Excellence in Geology, University of Peshawar, who not only suggested the topic but also provided us invaluable guidance, continuous support, advice and supervision throughout this work.

We also thank our internal supervisor, Mr. Hammad Ghani who always remained the first one to be out there for our support and guided us from the scratch and led us till the end of work.

We are thankful to Dr. Muhammad Zafar, HOD Department of Earth and Environmental Sciences Bahria University Islamabad for providing us lab facility.

We want to convey our thanks to Mr. Saqib, Lecturer Department of Earth and Environmental Sciences Bahria University, Mr. Ishtiaq Noor, Senior Sedimentologist HDIP, Islamabad for sharing their precious time and for giving us useful advices to complete this work successfully.

We are not forgetting our friends especially Mr. Umar Farooq, Mr. Umair Ali Moughal and Mr. Akif Amaan who kept on motivating us during the moves and swing in our work.

At last but not the least our family members who deserve regards and special thanks for their moral and financial support, throughout our educational career, without whos help we might not have been able to achieve our goals. May God bless them and may God give us a chance to serve them better.

Abstract

The basic intent of this study is to decode fracture density, secondary porosity and permeability of the Lumshiwai and Kawagarh formations. Lumshiwai and Kawagarh Formations are well known reservoir rocks of Pakistan. A significant portion of these formations is exposed along Nathiagali-Abbottabad road. The present study was carried out to understand the reservoir characteristics (fractures development, fracture density, secondary porosity and permeability) of these formations. Data for the fracture analysis was collected from 45 station points with an average 10 meter interval using the circle inventory method. Two types of data were collected during the course of field. Fracture orientation data and fracture description data. In fracture orientation data, 664 fracture orientation were measured in total while for fracture description data, in-situ length and width of each fracture was measured. Fracture orientation data was plotted and represented stereographically through computer aided software Geo-Orient while fracture density, porosity and permeability was calculated using Monte Carlo Technique.

Interpretation of fracture orientation data revealed two dominant fractures sets one having average NW strike and the other striking at NE. Our results indicate an average fracture density of 6.03cm^{-1} with an average porosity of 4.79% and permeability values of 6.03×10^7 Darcy. We interpret the variation in average fracture density, porosity and permeability to be because of close association of the fractures with a major anticline in the area. The crest of the anticline was found to be the site of maximum fracture density, porosity and permeability while limbs of anticline had comparatively low fracture density, porosity and permeability. These surficial characteristics of the Kawagarh and Lumshiwai formations make them an excellent candidate for a hydrocarbon reservoir.

Table of Contents

Acknowledgments	i
Abstract.....	ii
Chapter 1	1
INTRODUCTION.....	1
1.1. Location and Accessibility	2
1.2. Previous Work.....	2
1.3. Present Work.....	3
1.4. Objective of Present Study	3
1.5. Methodology	4
Chapter 2.....	6
REGIONAL TECTONICS.....	6
Chapter 3.....	9
GENERALIZED STRATIGRAPHY OF THE AREA	9
3.1. Pre-Cambrian Sequence	11
3.1.1. Hazara Formation.....	11
3.1.2. Tanawal Formation	12
3.2. Jurassic Sequence.....	12
3.2.1. Samana Suk Formation.....	12
3.3. Cretaceous Sequence.....	13
3.3.1. Chichali Formation	13
3.3.2. Lumshiwai Formation.....	14
3.3.3. Kawagarh Formation	15
3.4. Paleocene Sequences.....	16
3.4.1. Lockhart Formation.....	16
Chapter 4.....	23
STRUTURAL ANALYSIS OF FRACTURES.....	23
4.1. Introduction	23
4.2. Methodologies of Fracture Analysis	24
4.2.1. Selection method.....	24
4.2.2. Circle inventory method	24
4.3. Fracture Analysis.....	25
Data acquisition.....	25
Fracture orientation data	25

4.3.2 Data Representation	29
4.3.3. Data Interpretation	29
4.4. Calculation of Fracture Density, Porosity and Permeability.....	31
4.4.1. Fracture Density.....	31
4.4.2. Fracture Porosity.....	32
4.4.3. Fracture Permeability.....	32
Chapter 5.....	41
DISCUSSION AND CONCLUSION	41
5.1. Discussion	41
5.2. Conclusion.....	45
