APPROVAL FOR EXAMINATION

Candidate's Name: Muhammad Zain Hussain

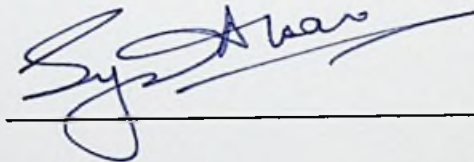

Registration No.: 60489

Zahidi

Thesis Title: _____

I hereby certify that the above candidate's thesis has been completed to my satisfaction and, to my belief, its standard is appropriate for submission for examination. I have also conducted a plagiarism test of this thesis using HEC prescribed software and found a similarity index at 16% that is within the permissible limit set by the HEC for the MBA thesis. I have also found the thesis in a format recognized by the Department of Management Sciences.

Acknowledgement

I would like to express my sincere gratitude to my supervisor Mr. Ahsan Rizvi for the continuous support of my MBA study and research, for his persistence, motivation, eagerness, and immense knowledge. His guidance helped me in all the time of research and writing of this thesis. I could not have imagined having a better supervisor and mentor for my MBA study.

Besides my supervisor, I would like to thank the rest of my desertation-1 supervisor Dr. Danish Iqbal Godail and thesis coordinator Dr. Mubashir Ali Khan for their encouragement and guidance.

Abstract

Purpose

Natural disasters affect any country on a large scale. After the occurrence of any natural or emergency situations, the operational strategies in which the concerned department contributes to coping up with the situation are critical to developing the effective supply chain for disaster management. A major focus of the researcher is to highlight the issues which are created to accommodate the victims in case of emergency and disaster occurred in Pakistan. Natural disasters cannot be prevented but their negative impacts can be overcome and reduced by adopting sufficient logistics strategies.

This study will be designed to contribute to an organizational inference. The major concern of the study is to find answers to address the basic problem and their possible solutions, such as to know the impact of professional growth on an emergency supply chain management and to specify effects by administrative conflicts on disaster management. Furthermore, to get a more vivid picture of the situation, the impact of corruption and political biasness in disaster management will also be investigated.

Methodology & Design

The current research work is to focus on humanitarian logistics during an emergency in Pakistan and also study the cognitive dissonance in a supply chain industry. A mixed-method

approach will be used to conduct the study. For secondary data, the relevant literature will be collected through authentic resources. To get primary data, a closed-ended questionnaire will be developed and distributed to 50 participants to investigate the purpose.

Findings

The findings shows different factors which directly effects the humanitarian supply chain management such as ; management role , lack of unified system , lack of resources , behavioral problems in employees, political biasness and many more.

Limitations

The study is limited in nature as it primarily focused on a small population and other financial and time constraints also made it limited so it cannot be generalized over the whole scenario.

Recommendation

This study offers a unified and unique system which will aim to appoint the passionate people who are willing to serve with devotion, adopt new strategies and effective planning without any personal lust or biasness.

Keywords: Organizational Behavior, Disaster Management, Supply Chain, Disasters Rehabilitation, Emergency and Disaster Situations, Humanitarian Approach, Corruption.
