- *CHAPTER 6:* **Data Presentation**

JROBOT: LEGO ROBOT SCANNER

FEATURING
CAPTURE IT!

By
Faisal Ramzan
(992CS030)

Supervised by
Dr. Muhammad Yousaf Khan

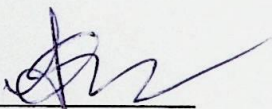

A report is submitted to department of computer science,
Bahria Institute of Management and Computer Sciences, Islamabad

In partial fulfillment of requirement for the degree of BCS

Department of computer Sciences
Bahria Institute of Management and Computer Science, Islamabad
University of Peshawar, Peshawar

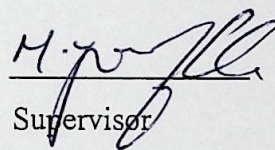

Certificate

We accept the work contained in this report as confirming to the required standard for the partial fulfillment of the degree of Bachelors in Computer Science (BCS).

Dedication

To all those, who helped me in giving this software and hardware the physical existence through their generous encouragement and support. Especially to my parents and family who have always been sources of inspiration for me.

Acknowledgements

All praise to **Allah Almighty**, the most merciful and compassionate, who enabled me to complete this project.

I am also thankful to our Prophet **Hazrat Mohammad (PBUH)**, because, His life is pattern for me to follow so I was able to accomplish the task of completing this project.

I also want to express my profound thanks to my supervisor **Dr. Muhammad Yousaf Khan**, for his able guidance and encouragement throughout the course of this project, his enthusiasm, as well as his readiness to render assistance to me whenever necessary.

I also wish to express my gratitude to my dear friends, who helped in making this project possible by simulating discussions and by constructive criticism.

And last but not the least, I would like to acknowledge the support of my parents and all the family members, who mean the most to me, and whose prayers are always with me.

Faisal Ramzan

Abstract

Since the industrial revolution and with growing technological advancements, mankind has been busy in making intelligent machines in order to lessen the workload on humans. A robot is a versatile mechanical device equipped with actuators and sensors under control of a computing system. In this project a robot called Lego Robot Scanner is built that scans the picture and software is developed with the help of which various image editing operations may be performed on the scanned image. The Lego Scanner scans the picture pixel by pixel. It reads the pixel values by moving the light sensor on the picture along x-axis in back and forth fashion. Then it sends the pixel values of each scan line from RCX to the PC. On PC side an array is allocated that keeps on accumulating these pixel values until all the pixels are read. After this, program running on PC side constructs an image from that array and displays it on the screen also creating the image file. Later on various operations can be performed on that image as desired by the user.

Declaration

I hereby, declare that project neither a whole nor as a part there of has been copied out from any source. It is fully declared that I have developed this system and the accompanied report entirely on the basis of my personal efforts under the sincere guidance of my supervisor. If any part of this report is proved to be copied out or found to be reported, I shall stand by the consequences. No portion of the work presented in this report has been submitted in support of any application for any other degree or qualification of this or any other institute, university or other.

Faisal Ramzan
