APPROVAL FOR EXAMINATION

Candidate's Name: Syed Ahsan Ali Gardazi Registration No.: 73286

Thesis Title: Profitability of Pakistan's Banking Sector and COVID-19

I hereby certify that the above candidate's thesis has been completed to my satisfaction and, to my belief, its standard is appropriate for submission for examination. I have also conducted plagiarism test of this thesis using HEC prescribed software and found similarity index at 18% that is within the permissible limit set by the HEC for the MBA thesis. I have also found the thesis in a format recognized by the Department of Business Studies.

Acknowledgement

This thesis would not have been possible without the support of many people. Many thanks to my adviser, Dr. Mubashir Ali Khan, who was always patient and accommodating regarding all of my queries. I would also thank Dr. Waqar Muhammad Khan who offered his guidance and support at a crucial time.

Thanks to the Bahria University for providing me with the knowledge to be able to produce this research.

Abstract

Purpose:

To investigate the impact COVID-19 pandemic has had on the profitability of the banking sector of Pakistan.

Methodology & Design:

The analysis was done using the Autoregressive Distributed Lag (ARDL) bounds testing approach to cointegration. Data was available on the website of State Bank of Pakistan and Pakistan Bureau of Statistics.

Findings:

It has been found that rather than having a negative impact, COVID-19 seems to have had a positive impact on the profitability of the banking sector of Pakistan. This positive impact maybe linked to the policies and programmes started by the government and the regulator to stimulate the economy in the face of the COVID-19 pandemic.

Limitations

Policy decision data needs to be incorporated so that exact effect of each policy can be judged and accurately investigated. This will help the researchers better deduce which policy measures were helpful.

Recommendations

Although ARDL approach is robust with a small dataset, it is recommended to use a large dataset to more accurately come to deduce the relationships between different variables.

Keywords

COVID-19, Autoregressive distributed lag, Banking sector profitability.
