Last but not the least, I extend my deepest thanks and regards to Bahria University, for providing me with the opportunity and facilitating me with all the resources required for my thesis work.

Abstract

Purpose

The purpose of the study was to examine the impact of social media addiction, social media reaction on work-life balance, job burnout and subsequently on job performance. We look into how social media usage in the workplace affects job performance, with a particular emphasis on how job burnout and work-life balance are affected by employees' social media addictions

Methodology & Design

To test the proposed model, data was collected with the help of five point liker-scale survey questionnaire from 250 employees of different demographics. Subsequently, the data was analyzed using partial least square structural equation modelling (SEM).

Findings

The results depicted positive relation between social media addiction and work-life balance. The findings also showed that there is no relation between social media addiction and job burnout. Both social media reaction and work-life, social media reaction and job burnout showed significant associations. Job burnout and work-life balance was also supported according to the results of structural model analysis.

Limitations

The limited time to collect the data, which also led to collection of limited data were the major limitations of this study. The data collection was limited to Karachi and only a few respondents from other cities, such as Islamabad, Peshawar, and Rawalpindi. Due to this, the study cannot be generalized on a national level. A limitation of using questionnaire as the only source of data collection was also faced by the researcher, neglecting interviews, and focus groups as a data collection method.

Recommendations

We appreciate further research on how social media create diverse emotional feelings among the social media users. Considering our research is this construct, therefore we incorporate social media reaction into a single variable. However, there is a differences in anger, sadness depression, frustration, contentment, satisfaction, pleasure, happiness, and other kinds of emotional phases.

Keywords

Social media addiction, social media reaction, work life balance, job performance, job burnout, conservation of resource.
