FINAL YEAR PROJECT REPORT

**HEART SOUND CLASSIFICATION USING
ARTIFICIAL
NEURAL NETWORK**

By

SYED BASEERUDDIN	(43794)
ABDUL WAQAR	(40980)
AKBER TAJANI	(43772)

SUPERVISED BY

(BILAL MUHAMMAD IQBAL)

BAHRIA UNIVERSITY (KARACHI CAMPUS)

2019

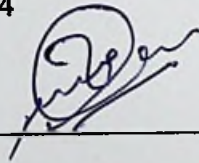

DECLARATION

We hereby declare that this project report is based on our original work except for Citations and Quotations which have been duly acknowledged. We also declare that it has not been previously and concurrently submitted for any other degree or award at Bahria University or other institutions.

Name : Syed Baseeruddin

Reg No. : 43794

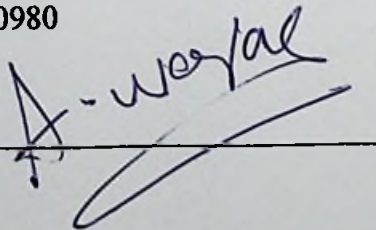

Signature: _____

Name : Abdul Waqar

Reg No. : 40980

APPROVAL FOR SUBMISSION

We certify that this project report entitled **“HEART SOUND CLASSIFICATION USING ARTIFICIAL NEURAL NETWORK”** was prepared by **SYED BASEERUDDIN, ABDUL WAQAR, MUHAMMAD AKBER TAJANI**, has met the required standard for submission in partial fulfilment of the requirements for the award

Approved by,

Signature: 

Supervisor: Bilal Muhammad Iqbal

Date : 07-02-2020.

ACKNOWLEDGEMENTS

We would like to thank everyone who had contributed to the successful completion of this project. We would like to express my gratitude to my research supervisor, Mr Bilal Muhammad Iqbal for his invaluable advice, guidance and his enormous patience throughout the development of the research.

In addition, we would also like to express my gratitude to my/our loving parent and friends who had helped and given me encouragement.

HEART SOUND CLASSIFICATION USING ACRITICAL NEURAL NETWORK

ABSTRACT

Heart anomalies are many times detected using a stethoscope through a physician. Currently, there are digital stethoscopes and cell gadgets that everybody can use to document their heart sounds, however, besides technical knowledge, it will be difficult for them to understand if there are any anomalies. This project affords a system for classifying these audio heart recordings to five most usually occurring classes: artifact, more coronary heart sound, extra systole, murmur and normal heartbeat. Our research also compares the precision and F-scores of machine studying models, which include Naive Bayes, Support Vector Machines and Decision Trees and CNN. Using the manner outlined in this paper, the results are a significant attraction to the state of the artwork for all classes without for extra systole and normal heartbeats. The paper additionally outlines practicality and subsequent steps to improve audio coronary heart sound classification. The accuracy rate of the ANN system for simulated sounds is matched to the accuracy rate of a group of medical students who were asked to classify heart sounds from the same group of sounds classified by the ANN system.

CHAPTER

1	INTRODUCTION	19
	1.1 Background	20
	1.2 Problem Statements	21
	1.3 Aims and Objectives	21
	1.4 Scope of Project	22
2	LITERATURE REVIEW	23
	2.1 Detection of heart features	23
	2.1.1 Methods of different researches	24
	2.1.2 Classification of Heart Sound using attributes	25
	2.1.3 Sounds Study	26
	2.2 MFCC	27
	2.2.1 Discrete Wavel's Transforms (DWT)	27
	2.3 Detection of Cardiac using segmentation techniques and ANN	
	2.3.1 Feature Extraction	29
	2.3.2 Feature Reduction	30

3	DESIGN AND METHODOLOGY	34
3.1	Design	34
3.2	Project Methodology	35
4	IMPLEMENTATION	37
4.1	Implementation	37
4.1.1	Registration	37
4.1.2	Account Creation	37
4.1.3	Data Collection	38
4.1.4	Download different selected classes	39
4.1.5	Writing dataset into CSV file	40
4.2	Data Pre-Processing	41
4.3	Feature Selection	42
4.4	Heart Sound Detection	43
4.4.1	ANN	43
4.4.2	Naïve Bayes	46
4.4.3	Decision Tree	49
4.4.4	Support Vector Machine	50
		53
5	RESULTS AND DISCUSSIONS	54
5.1	Results	54
5.1.1	Naïve-Bayes	56
5.1.2	SVM	58
5.1.3	Decision Tree	62
5.1.4	ANN	65
5.1.5	Hardware Implementation	68
