Name : BISMA KHURSHEED.

Reg No. : 54249

Signature : B/A

Name : BUSHRA RAFIQUE MALIK.

Reg No. : 54247

Signature : Camp/lyx

Name : HAFIZA ROMAISA ASHRAF.

Reg No. : 54245

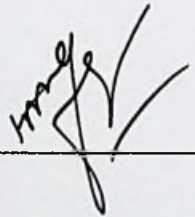

Date : 15-january-2022

APPROVAL FOR SUBMISSION

We certify that this project report entitled "AN AUTOMATE MOBILE APPLICATION FOR FIRE DETECTION USING DEEP LEARNING" was prepared by BISMA KHURSHEED, BUSHRA RAFIQUE MALIK, HAFIZA ROMAISA ASHRAF has met the required standard for submission in partial fulfilment of the requirements for the award of Bachelor of BSIT at Bahria University.

Approved by.

AN AUTOMATE MOBILE APPLICATION FOR THE DETECTION USING
DEEP LEARNING

ACKNOWLEDGEMENTS

We would like to thank everyone who had contributed to the successful completion of this project. We would like to express my gratitude to my research supervisor. Dr HUMERA FAROOQ for her invaluable advice, guidance and her enormous patience throughout the development of the research.

In addition, we would also like to express my gratitude to our loving parent and friends who had helped and given me encouragement.

AN AUTOMATE MOBILE APPLICATION FOR FIRE DETECTION USING DEEP LEARNING

ABSTRACT

As a new fire detection technology, image fire detection has recently played an important role in reducing fire losses by alarming users early through early fire detection. Image fire detection is based on an algorithmic analysis of images. However, there is a lower accuracy, delayed detection, and a large amount of computation in common detection algorithms, including manually and machine automatically extracting image features. Therefore, novel image fire detection algorithms based on the advanced object detection CNN models. A comparison between proposed and current systems reveals that the accuracy of fire detection algorithms is depend on object detection CNNs is higher than other algorithms. We use TensorFlow in our project. TensorFlow is a Python library for fast numerical computing created and released by Google. It is a foundation library that can be used to create Deep Learning models directly or by using wrapper libraries that simplify the process built on top of TensorFlow.
