ACKNOWLEDGEMENTS

We would like to thank everyone who had contributed to the successful completion of this project. We would like to express gratitude to our research supervisor, Miss Sameena Javaid for her invaluable advice, guidance and her enormous patience throughout the development of the research.

In addition, we would also like to express gratitude to our loving parent and friends who had helped and given me encouragement.

ONLINE BANQUET MANAGEMENT SYSTEM

ABSTRACT

As we see in today's world all businesses are moving online and users feel comfortable doing their work online, without interacting with someone. We have an idea to make an online system that provides banquet booking facilities to the people. By using this system people can easily book their banquet without going anywhere. We make an automated administrative online banquet system with a 3D virtual tour feature for clients, this system is to facilitate people to arrange Banquet in their comfortable environment, due to COVID-19 we develop a system that provides the least interaction with the people and we can do our work safely. Also, our focus is to keep track of the availability of the Banquet to save customers crucial time. OBMS is an effective complete web solution for banquet booking, any sort of program can be entertained via OBMS it reduces the human effort for banquet booking and involves stakeholders (Banquet Administration & Customer) thoroughly. OBMS support multiple vendors (Decoration, Sound System, Caterers) same may be involved in any event partially or completely. We also add an Admin portal in our system that can manage overall system functions and assign permissions and roles to the users of this system. Customers of OBMS can easily customize arrangements and vendor resources accordingly. Banquet administration can engage all vendors from a single platform, and may easily manage financials. OBMS provides a facility for all users to set customized events according to requirements and see their banquet through a 3D virtual tour of each banquet, the further user may easily communicate with banquet administration within an application for any sort of queries, and secure payment can be made via this system.
