## ACKNOWLEDGEMENTS

We would like to thank everyone who had contributed to the successful completion of this project. We would like to express my gratitude to my research supervisor, Miss Azeema Sadia for his/her invaluable advice, guidance and his/her enormous patience throughout the development of the research.

In addition, We would also like to express my gratitude to our loving parent and friends who had helped and given me encouragement.

## **Rent a place Web based application**

### **ABSTRACT**

The main objective behind building this Web based application running on the Web is to make contribution in the revolutionary digitalism in IT field. Previously all the real estate websites had either buy a place and rent it for year or either rent it for day and just that the two of them were never in the same application that is having rent a place for either for a number of days or night and also to be able to buy property and upload your property on the same platform. With rent a place application you have all the task related to real estate marketing in a single place you can now rent a place as well as a small place ie kitchen , garden, garage.

As discussed above this system is made with Web Integrated mutually with the same Database. For its Frontend Multiple platform are being used like Html5, CSS3, Owl Carousel, Bootstrap. For Backend development of our integrated system "PHP apache" is being used. For the flow of data. A database from MySQL. This system works as a framework for users and real estate agencies to make end users to sell, buy and rent property. With the help of agent all of the paperwork will be done via agent and you can easily pay rent through online system without going to the bank or visiting your landlord.
