

FINAL YEAR PROJECT REPORT

**IMAGE BLUR ESTIMATION AND REMOVAL
USING DEEP LEARNING**

In fulfillment of the requirement

For degree of

BS (Computer Science)

By

USMAN SAEED

48441 BSCS

MUHAMMAD DANİYAL

48468 BSCS

USMAN IJAZ

48450 BSCS

SUPERVISED

BY

MS. SAMEENA JAVAID

BAHRIA UNIVERSITY (KARACHI CAMPUS)

FALL-2020

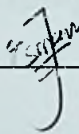

DECLARATION

We hereby declare that this project report is based on our original work except for citations and quotations which have been duly acknowledged. We also declare that it has not been previously and concurrently submitted for any other degree or award at Bahria University or other institutions.

Date : 22nd December 2020

 _____

ACKNOWLEDGEMENTS

We would like to thank everyone who had contributed to the successful completion of this project. We would like to express my gratitude to my research supervisor, Dr Sameena Javaid her invaluable advice, guidance and her enormous patience throughout the development of the research.

In addition, we would also like to express my gratitude to our loving parent and friends who had helped and given me encouragement.

IMAGE BLUR ESTIMATION AND REMOVAL USING DEEP LEARNING

ABSTRACT

The objective of this project is to develop a system that estimates the type of image blur and removes it using deep learning. This report explores different techniques used for image blur estimation and removal. Different stages involving image processing that include pre-processing stage, segmentation, and feature extraction will be discussed in this report. The end product of this project will be coded in Python.

This project uses Convolutional Neural Network (CNN) and Artificial Neural Network (ANN) to develop the software. The advantage of CNN is that it allows prominent features extraction from a data that is 2D and 3D. Then the ANN is used to estimate the type of blur so that it could be removed. After the initial stages of pre-processing, training and testing is done and 90% of data is used for training and remaining 10% for testing. There are three layers used in CNN among which two are hidden layers. The total of 192 neurons are used in this system.

CHAPTERS

1	INTRODUCTION	1
	1.1 Background	1-2
	1.2 Problem Statements	2
	1.3 Aims and Objectives	5
	1.4 Scope of Project	5
2	LITERATURE REVIEW	6-8
3	DESIGN AND METHODOLOGY	9
	3.1 CNN Classifier	9-10
	3.2 Project Architecture	11
	3.3 Techniques used to maximize accuracy	12
	3.3.1 Data Augmentation	12-13
	3.4 Accuracy Model	13
	3.5 3D Model	14

4	IMPLEMENTATION	15
4.1	SRCNN Network	15
4.1.1	Patch Extraction	15
4.1.2	Nonlinear Mapping	16
4.1.3	Reconstruction	
4.2	Loss Function	17
5	RESULTS	18
5.1	SS of Running Project	18-20
6	CONCLUSION	21
	REFEENCES	22
