ACKNOWLEDGEMENTS

First and foremost, we thank Almighty ALLAH for endowing us with the ability to think, work, and complete the tasks that have been allotted to us.

Second, we are grateful to Miss Azeema Sadia, our project supervisor, for her assistance throughout the project. She was a driving force behind us, always willing to provide a hand when we needed it.

We would also like to express our sincere gratitude to our caring guardian and colleagues who have encouraged and guided me.

RETAILOR TO VENDOR APPLICATION

ABSTRACT

The number of people living in the country is growing every day, posing new challenges for both the people who live here and the country as a whole. Food and clothing, both of which are essential for daily life and which we obtain from canteens or garment shops, are among the most pressing needs. In the emerging era, when virtually everything is on mobile, canteen or garment shop owners go to the vendor who supplies their stores and ask the vendor if the food they need is accessible or not. After wasting a lot of time, the shopkeeper gets the items for their canteen or whatever they need. but as we know that all thing is not available to the one vendor so shopkeeper will visit to another vendor and the process carry on, for eliminating these issues we offered this solution named SMART RTV. The name of the system implies that it is designed for sellers and retailers. What it will accomplish is to establish a solid, hassle-free connection between vendors and merchants. The vendor will upload all of the products into the system, and retailers will be able to easily access it and order any product they desire by simply logging into the programmatic. It can also forecast future sales for vendors, giving them an indication of how much of a given product they will sell in the future. The RTV provide solutionthat helps enterprise businesses to manage customer relationships in a highly organized and efficient way. Smart RTV solution, is feature-rich software that seamlessly integrates all aspects of customer life cycle from identifying business opportunities to manage time and sustaining existing customers. The purpose of this SMART RTV application is to address a problem that merchants and vendors have.
