EVENTS

ABSTRACT

ACKNOWLEDGEMENTS

All events listed on this page are subject to change without notice. Please check the website for the most up-to-date information.

We would like to thank everyone who had contributed to the successful completion of this project. We would like to express my gratitude to my research supervisor, Miss Fatima Bashir for her invaluable advice, guidance and her enormous patience throughout the development of the research.

In addition, we would also like to express my gratitude to our loving parent and friends who had helped and given me encouragement.

EVENT HUB

ABSTRACT

All event-related actions are tracked using the Event Hub. Multiple service providers are functioning at the same time in any instance, making administration challenging. It's also crucial for the event planner to have all of these service providers' contact information on hand so that he may call them at any time to schedule an event. This was made to keep track of all of these actions. The user must have a strong network of service provider relationships to be successful in the event management sector. These individuals are essentially service providers who can be quickly contacted to participate in any given event. To make an event effective, several service providers are necessary, such as sound systems, lighting, canteen services, stage decoration, and so on. Multiple service providers are functioning at the same time in any instance, making administration challenging. The organiser must also have all of these service providers' contact information so that he may call them at any time to schedule an event at a certain time. Event Company is now obliged to do all management chores manually under the current system. On paper, all payment information is saved. There is no system in place to check the costs of prior events. They must check the payment register in order to do so, which is a time-consuming and tedious operation.
