Acknowledgments

We the students of Department of Computer Engineering (Bahria University Karachi Campus), First and foremost, praise Allah (SWT) for his gratitude and blessings throughout our project development and demonstration.

We would like to express our sincere gratitude to our institution, our instructors, and our project supervisor, **Dr. Shoaib Mughal** and our co-supervisor "**Ma'am Shabnam**" for their invaluable contributions to the successful completion of this project. **Dr. Shoaib Mughal's** and **Ma'am Shabnam** dynamism, vision, sincerity, and motivation have deeply inspired us. Their valuable advice, guidance, and time throughout the development of the project have been instrumental in our success. We would also like to thank our parents and friends for their advice, prayers, and continued support and motivation. Their encouragement kept us going during this challenging tenure. Finally, we would like to thank our university for giving us the platform to showcase our skills and display them in front of the whole world.

Abstract

Bullying is a serious problem that can have a devastating impact on children. This project proposes the development of a chatbot, Ada, to help children who are being bullied. Ada will be able to identify bullying behavior, provide support to victims, and report bullying incidents. The project has the potential to be a valuable resource for children who are being bullied. Ada will provide a safe and confidential space for children to talk about their experiences with bullying, and she will offer them support and advice on how to deal with bullies.

Keywords: Bullying, chatbot, machine learning, child safety
