ACKNOWLEDGEMENTS

First, we would like to thank **Allah Almighty**, who helped us and also helping us in every step of this project development, and we are also thankful to everyone who had contributed to the successful completion of this project. We would like to express gratitude to our project supervisor, Dr Kashif for his invaluable advice, guidance, and his enormous patience throughout the development of this project.

In addition, we would also like to express gratitude to our loving parent and friends who had helped and given us encouragement.

NIZAM-E-ILLAHI (AN ISLAMIC SOCIAL NETWORK)

ABSTRACT

The objective of this project is to fulfil the need of every Muslim, i.e., an Islamic social media. We are now living in an age where social media has become a part of our lives and we can't spend a single hour without seeing over feeds. Many social media giants are jumping into the race of social media but from what we have researched none of them are inclined towards Muslim Community. We are trying to fill this gap by developing a platform completely dedicated to the Muslim community and purely based on Islamic values. Nizam-e-Elahi is an Islamic social media for Muslims where we have focused on two main things as for the scope of Final Year Project i.e., textual presentation of posts and visual presentation of posts. As for the textual posts we will be removing islamophobia which for what we have seen never been implemented in any application, then we will be focusing on the authentication of hadiths and Qur'anic verses to restrict the user to only add those hadiths and Qur'anic verses which are authentic with references. As for Visual posts we will implementing NSFW APIS for detecting content, videos or website pages the viewer may not wish to be seen looking at in a public, formal or controlled environment. As of our secondary goal we will be implementing Friend System, Follower System, Groups and Pages will be there for users to explore, a complete search engine for Qur'anic and Hadiths, Comment and Like system for posts and Identity verification process to make the users verified for creating Pages and Groups.

As for the scope of fulfilment of this Project we have completed the Authorization and Authentication of user, implementation of AI/ML models for the filtering of textual posts which includes (Islamophobia, Hate Speech, Tags Generation, Translation and Similarity Model) beside these implementation we have also developed an appealing UI for the presentation of these work using Reactjs. In case of Visual posts we have managed to develop NWSF model, Face Info model, Image Info Model, OCR and Hijab Detection model to complete the development of this project.
