ACKNOWLEDGEMENTS

We would like to thank everyone who had contributed to the successful completion of this project. We would like to express my gratitude to my research supervisor, Mr. Malik Ali for his invaluable advice, guidance and his enormous patience throughout the development of the research.

In addition, we would also like to express my gratitude to our loving parent and friends who had helped and given me encouragement.

ABSTRACT

The event management system is used to keep track of all event-related activities. In any case, many service providers are working at the same time, making management difficult. It is also critical for the event organiser to have all of these service providers' contact information so that he can contact them at any time to plan an event at a specific time. We created this software to keep track of all of these activities. To be successful in the event management business, the user must have a large network of service provider contacts all under one roof. These contacts are essentially service providers who can be quickly mobilised to take part in any given event. To make an event a success, the event manager will need a variety of service providers such as photographers, decorators, caterers, venue providers, and so on. In any case, many service providers are working at the same time, making it difficult to manage them. It is also critical for the event organiser to have all of these service providers' contact information so that he can contact them at any time to plan an event at a specific time.
