2012-2016

ACKNOWLEDGEMENTS

We would like to thank everyone who had contributed to the successful completion of this project. We would like to express our gratitude to our research supervisor, Miss Hina Shakir for her invaluable advice, guidance and her enormous patience throughout the development of the research.

In addition, we would also like to express our gratitude to our loving parents for funding our project and always believing in our idea and making all efforts so that we can complete this project.

MIND CONTROLLED WHEELCHAIR

ABSTRACT

This project explores the field of neural signals and how they can be used in communication or applications. The objective of this project is to control a wheelchair using brainwaves and Bluetooth communication. User will be able to control the wheelchair by wearing an EEG headset that reads brain signals. The wheelchair will respond accordingly to the "thought" of the user i.e. if the user wants to move in forward direction, he/she should concentrate on an object to increase attention level and wheelchair will move forward. For us it is a revolution in technology but for the physically disabled, it is a life changer. People with locked-in syndrome, in which their brain is working but the rest of the body is paralyzed, or others with some sort of physical disability will be able to control their own wheelchair without the help of any attendant by just using their mind to go forward or reverse or any direction by just thinking about it. Mind controlled wheelchair can change the lives of paralyzed and physically disabled people by giving them independence of controlling their own wheelchair.

TABLE OF CONTENTS

	CHAPTER 1	12
1	INTRODUCTION	12
	1.1 Background	12
	1.2 Problem Statements	12
	1.3 Aims and Objectives	13
	1.4 Scope of Project	14
	1.5 Problems Regarding the University Administration:	15
	 CHAPTER 2	 16
2	LITERATURE REVIEW	16
	2.1 Brain Computing Interface	16
	2.2 EEG	17
	2.3 Data Acquisition	18
	2.4 Type of EEG Headsets	22
	2.5 Bluetooth Communication	28
	2.6 Arduino Microcontrollers	30
	2.7 Flex Sensors	38
	2.8 Ultrasonic Sensors	39
	 CHAPTER 3	 42
3.1	DESIGN AND METHODOLOGY	42
	3.1.1 Starting with the Project	42
	3.1.2 Selection of the EEG headset	43

		10
3.1.3	Working with the Emotiv EPOC+	44
3.1.4	Moving to the NeuroSky headset	46
3.1.5	Design and construction of the 4WD Model Car	46
3.2	IMPLMENTATION	47
3.2.1	Interfacing NeuroSky Mindwave Mobile with HC-05 BT Module	48
3.2.2	Entering into the Command Mode	49
3.2.3	Construction of 4WD and connecting to Arduino Mega	51
3.2.4	Attaching the Ultrasonic sensor	53
3.2.5	Testing the codes on the 4WD model car	55
3.2.6	Moving on to the Wheelchair	57
3.2.7	Attaching the Flex Sensor	61
CHAPTER 4		64
RESULTS AND DISCUSSIONS		64
4.1	Mind controlled features	64
4.2	Other features	65
CHAPTER 5		66
CONCULUSION AND RECOMMENDATIONS		67
5.1	Conclusion about Mind controlling features	67
5.2	Recommendations	69
