BY

ASTT.PROF. AZMAT KHAN

BAHRIA UNIVERSITY (KARACHI CAMPUS)  
2014

## **Acknowledgement**

In the name of ALLAH, the complete compassionate, the perfect merciful. He, who gave us the skill to conclude this project.

Firstly, we would like to thank our Project Supervisor Sir Azmat Khan who gave us direction and guidance as well as portrayed numerous things in subtle element, which were extraordinarily useful and that really took shape of our Project, furthermore provided his valuable time to us. His readiness inspired us and we might likewise want to thank him for demonstrating to us a few sample, thoughts, cases and plans which were connected to our project.

Also, we are likewise incredibly appreciative to the authority of Bahria University (BU) for giving us such an environment which was inviting and was full of facilities. The university provided us agreeable labs and the spot where we gave our time for the undertaking. We are grateful to Sir Adnan who helped us a ton in the project lab. We are thankful to all the teachers of Electrical department who gave us their valuable suggestions and advice regarding the project furthermore we are also thankful to Lab assistant Muhammad Riaz to assist us for some practical work regarding the project in the Electrical machine Lab. We are additionally appreciative to the Department of Engineering furthermore grateful to our Project Advisor Sir Burhan Ahmed for depicting positive attitude in this undertaking.

At long last, we are exceptionally grateful to our families and companions for their understandings and backings on us in finishing this undertaking. Without aides of the specific that specified above, we would confront numerous troubles while doing this project.

## **Project Abstract**

This project is a step to diminish the wastage of electricity and to make the electrical system efficient as there is great energy crisis in Pakistan so what we can do is to remove or decrease the wastage or power loss and improve the power system furthermore this project is an attempt to design and implement automatic power factor controller panel or system using PLC (programmable logic controller).

The decomposition of our project comprised of Motor Control Circuit, Motors, Power Factor Correction Control Circuit, Power Factor Correction Capacitors, Sensors & Transducers (Real power transducer and Power factor transducer), and Fatek PLC.

There are two three phase induction motors of 1hp each which can be operated through HMI and pushbuttons which are digital inputs to the PLC. Protection like MPCB and EOCR is there to safely switch off or trip the motors under short circuit and overload conditions.

Three step power factor correction capacitor banks has been build which is working in two modes that is automatic and manual. Single phase capacitors are used to make three phase delta connected capacitor to improve the power factor of the electrical system.

There are two analog values coming to analog board of Fatek PLC from real power transducer and power factor transducer which are then processed according to the ladder diagram.

Fatek FBs 20MA PLC is used as a controller in this project. PLC is monitoring the real power and power factor of the whole load and then by processing both the analog values from two transducers along with the help of ladder programming taking actions by switching on/off capacitor bank to improve the power factor.

## Table of Contents

1.	Introduction.....	1
1.1.	Objective .....	1
1.2.	Scope .....	1
1.3.	List Of Major Components .....	2
1.4.	Block Diagram.....	3
2.	Background And Literature Review .....	5
2.1	Introduction To Power Factor Correction .....	6
2.2	Technical Advantages Of Power Factor Correction .....	7
2.2.1.	Better Use Of Electrical Equipments And Machines.....	9
2.2.2.	Better Use Of Electrical Lines.....	10
2.2.3.	Diminishment Of Losses.....	11
2.2.4.	Diminishment Of Voltage Drops .....	13
2.3.	Economical Advantages Of Power Factor Correction .....	13
2.4.	Environmental Advantages Of Power Factor Correction.....	14
2.5.	Types Of Power Factor Correction Using Capacitors .....	14
2.5.1.	Dispersed Or Distributed Or Individual Power Factor Correction .....	14
2.5.2.	Group Power Factor Correction .....	15
2.5.3.	Incorporated Or Centralized Power Factor Correction.....	16
2.5.4.	Automatic Power Factor Correction .....	16
2.6.	Other Main Means Of Generating Reactive Power .....	17
2.6.1.	Synchronous Compensators/Condensers.....	17
2.6.2.	Static Var Compensators.....	18
2.7.	Current Knowledge Regarding The Project.....	19
3.	Aim And Statement Of Problem .....	20
3.1.	Why Is PLC Used In This Project? .....	20
3.2.	Aim Of The Project .....	20
3.3.	Over All Project Description .....	21
3.4.	Hurdles And Difficulties Faced In The Project.....	21

4.	Analysis And Design.....	24
4.1.	Three Phase Induction Motors .....	26
4.1.1.	Construction Of 3-Phase Induction Motor.....	26
4.1.2.	Principle Operation .....	28
4.1.3.	Synchronous Speed.....	29
4.1.4.	Slip .....	29
4.2.	Capacitor Banks And Its Calculation.....	30
4.2.1.	Capacitor Banks Calculation.....	32
4.3.	EOCR (Electronic Over Load Relay) .....	36
4.4.	Magnetic Contactors .....	37
4.4.1.	Operating Principle .....	37
4.4.2.	Ratings.....	37
4.4.3.	IEC Standards .....	37
4.5.	HRC Fuses .....	38
4.5.1.	Operation .....	39
4.5.2.	Overload Condition .....	39
4.5.3.	Short Circuit Condition.....	40
4.6.	Bus Bars .....	40
4.7.	MPCB (Motor Protection Circuit Breaker) .....	40
4.8.	MCB (Miniature Circuit Breaker).....	41
4.8.1.	Construction Of MCB .....	42
4.8.2.	Types Of MCB.....	43
4.9.	PLC (Programmable Logic Controller) .....	43
4.9.1.	Basic Parts Of PLC.....	43
4.9.2.	Basic Parts Of PLC.....	44
4.9.3.	Operation of PLC .....	45
4.9.4.	Fatek FBs Series PLC.....	46
4.10.	HMI (Human Machine Interface) .....	49
4.10.1.	Introduction To HMI.....	49

4.10.2. Delta DOP-B07S411.....	50
4.10.3. EasyBuilder8000 V4.41 .....	54
5. Implementation .....	58
5.1.Project Ladder Diagram.....	58
6. Testing.....	66
6.1.Motor Section Testing.....	66
6.2.Capacitor Bank Section Testing.....	66
6.3.PLC Testing .....	67
6.4.HMI Testing .....	67
6.5.Over All Project Testing .....	67
7. Results And Discussion.....	69
8. Conclusions And Future Work .....	70
Appendix A .....	71
Analog Expansion Board FBs-B2A1D .....	72
References.....	74
List of References .....	74
List of Books.....	75
1. Principles of Power System by V. K. Mehta and Rohit Mehta (Mar 1, 2005).....	75
List of Manuals .....	75
