ACKNOWLEDGEMENTS

First and foremost we would like to thank Allah All Mighty for giving us the strength and ability to do this project.

We would like to thank our parents and families for always being there, support us and firmly believing in us.

We would like to thank all our teachers from school, college, and university for enabling us to reach here.

Working on this project has been a challenging, exciting and at times difficult process. There are many peoples who helped us in getting through this journey. However, there are certain people we must name individually without whom this project would not have been possible.

Our project supervisor, Engr. Muhammad Khalid who was always there guides us and ease our Problems. he supported us throughout this project and believed in us all the way.

Engr. Burhan Ahmed, our project coordinator

Engr. Masood usman, our project sub coordinator

Finally, we would like to thank all the lab assistants for always making the hardware labs available to us in the best way possible.

ABSTRACT

This report is about our final year project the precise position and speed control of Dc Servo motor for variable load and the desired position. It contains all the details about the project and from how we decided to do this particular project all the way up to how we achieved it.

The project is primarily about the object controlling and precise position system for controlling this system we are using microcontroller technology (AVR atmega16) that is interfaced with other useful devices or sensors that are we using in our project like load cell and IR sensor and encoder and lcd and keypad and object counter and dc gear motor and conveyor belt.

We are using keypad because precise position of object will define at different positions by user keypad will initialize the overall process by press star button. Lcd will display the object of information that is controlling by devices and here we are using sensors load cell and IR sensor and encoder and load cell used for measuring object load in the form of electrical signal voltages and current. IR sensor used for finding the presence and absence of object conveyor belt is performing the task of moving object in forward side.

Our load cell and IR sensor and DC gear motor and encoder is coupled with conveyor belt system. dc gear motor is controlling and moving the conveyor system.

The overall process is that when our object will placed on the conveyor belt then IR sensor will be active and find out that the object is present or not. And after that object will move forward through load cell and measure load in the form of voltages and current and then object will place at different position that will be decided by user and after that project will come down from conveyor belt from passing object counter that is counting the no of objects that are coming through conveyor belt and C-language software is using for controlling the tasks through microcontroller AVR atmega16 and other devices.

TABLE OF CONTENTS

ACKNOWLEDGEMENTS.....I

ABSTRACT.....II

CHAPTER 1

INTRODUCTION

1.1 Introduction	1
1.2 Functional block diagram	2
1.3 Design methodology	3

CHAPTER 2

BACK GROUND AND LITERATURE AND REVIEW

2 Chapter overview	6
2.1 Dc gear motor	6
2.1.1 What is Dc gear motor?	6
2.1.2 Internal structure	7
2.1.3 Description	10
2.1.4 Working	11
2.2 Encoder	12
2.2.1 Description	12
2.2.2 Features	13

2.2.3 Applications	13
2.2.4 Operations	13
2.2.5 Block diagram	15
2.2.6 Output waveform	15
2.3 Load cell	16
2.3.1 Introduction	16
2.3.2 Working of strain guage	17
2.3.3 Working of load cell	27
2.3.4 Specification of load cell	18
2.3.5 Commonly used to standard value.	19
2.3.6 Advantages	19
2.3.7 Disadvantages	19
2.4 LCD (Liquid crystal display)	19
2.4.1 Interfacing of microcontroller	20
With lcd.		
2.4.2 Pin description	21
2.4.3 Features	22
2.4.4 Lcd command code	23
2.4.5 Lcd circuit diagram	24
2.5 AVR At mega 16 microcontroller	25
2.5.1 Pin configuration.....		26
2.5.2 Features	28
2.5.3 Block diagram	29

2.6 IR sensor	30
2.6.1 Introduction	30
2.6.2 IR sensor consist of two parts	30
2.6.3 Why IR sensor used	31
2.6.4 How it is work into IR sensor	31
2.6.5 Description	31
2.6.6 Specification of IR sensor	32
2.6.7 Application	32

CHAPTER 3

AIMS AND STATEMENT OF PROBLEM	33
3.1 PROBLEM OUTLINE	33
3.2 Aim and statement of problem	33

CHAPTER 4

ANALYSES AND DESIGN	35
4.1 ANALYSIS AND DESIGN	35
4.2 load cell analysis	36
4.3 selection of load cell	37
4.4 selection of other system	39
4.5 Control system of servo motor	40

CHAPTER 5

Implementation

Coding (C language).....	42
--------------------------	----

CHAPTER 6

TESTING

HARDWARE TESTING

6.1.1 LOAD CELL TESTING.....	70
6.1.2 IR TESTING	71
6.1.3 ENCODER TESTING	69
6.1.4 MICRO CONTROLLER AVR TESTING.....	69
6.1.5 LCD TESTING	70
6.1.6 KEYPAD TESTING	71

SOFTWARE TESTING

6.5 C LANGUAGE	72
----------------------	----

CHAPTER 7

RESULT	73
