## ACKNOWLEDGEMENTS

I would like to thank everyone who had contributed to the successful completion of this project. I would like to express my gratitude to my research supervisor, Dr. Humera Farooq for her invaluable advice, guidance and her enormous patience throughout the development of the research.

In addition, I would also like to express my gratitude to my loving parent and friends who had helped and given me encouragement.

## RECEIPT MANAGEMENT PORTAL ON SMART PHONE USING OCR

### ABSTRACT

The objective of this project is to develop image recognition mobile application to recognize handwriting on receipts and management of those receipts. This report explores different techniques used for the recognition of handwriting and management of receipts. Different stages involving image processing like the pre-processing stage, segmentation and feature extraction will be studied and discussed. Finally the end product will be developed in the software called Sencha touch. Several features have been addressed in this project. For example De-skew, Despeckle, Binarization, Line removal, Layout analysis or "zoning", Line and word detection, Normalize aspect ratio and scale and Segmentation. Segmentation of fixed-pitch fonts is accomplished relatively simply by aligning the image to a uniform grid based on where vertical grid lines will least often intersect black areas. Recommendations for future development and conclusions are also included in the Report.
