ACKNOWLEDGEMENT

I student of BAHRIA UNIVERSITY Karachi Campus (APPLIED SCIENCES AND GRADUATE STUDIES DEPARTMENT) who has made the project "I-TECH FRIEND SYSTEM" would like to express my gratitude to

ALMIGHTY ALLAH

that He gave me the opportunity to candle my dark heart with the light of knowledge.

My special thanks goes to

ENGR. NABIHA FAISAL

who not only provided me with the idea of making this project but also keeping her trust on me that I can accomplish this project very well. She has given me the chance to work on this project. It has enhanced my abilities and increases my knowledge regarding practical life. She not only gives me her precious time but also shared her valuable thoughts about the topic. The supervision and support that she gave truly help the progression and smoothness of the project. The co-operation is much indeed appreciated. She has also taught moral lessons which will guide me in the walk of life always.

ABSTRACT

“To educate every child even in remote areas and automate the education system.”

To create a product that is based on Primary Education System. It is a graphics based project. As this is children psychology that they are attracted more towards glittering and moving objects rather than decent ones. Keeping this fact in mind I am going to in-corporate basic level animations and transformations. Also, it contained sound effects to attract children's attention towards academics basics.

The project minimizes the need of professional teachers to teach or need of books for basic education to children even in remote areas. By just giving a projection on a sheet, this product could teach children in an effective manner.

In general, it is a simple self-learning software product to gain knowledge. I need any educational NGO to achieve this goal. The existing education delivery system is not meeting the needs and aspirations of the society as such particularly; it is a challenge to the provinces and districts for the 21st century. Moreover, prior to devolution, the policy and planning has been undertaken by the central and provincial governments without taking into account the ground realities and without the participation of community. The main objectives of the devolution plan is to empower the community at the grassroots level in planning, management, resource mobilization and utilization, implementation, monitoring and evaluation of the education system to improve the service delivery at that level.

The main inherent issues of education systems are: teacher's absenteeism, high dropout rates particularly at primary level, high repetition rates, low completion rates, inequalities by gender, location and social groups, low literacy rate and unsatisfactory performance of schools, these issues have been addressed under DOP through empowerment of local communities.

TABLE OF CONTENTS

1. INTRODUCTION	13
1.1 Purpose	
1.2 Problem	
1.3 Solution	
2. LITERATURE REVIEW	17
3. REQUIREMENTS	30
3.1 Stakeholders	
3.2 Functional/Non Functional requirements	
3.3 Feasibility & Costing	
3.4 Scheduling	
3.5 Selection Criteria	
4. METHODOLOGY AND DESIGN	44
4.1 Logical/Physical modeling	
4.2 Methodology followed	
4.2 Diagrams (use- cases, context, ERD etc)	
4.3 GUI	
5. IMPLEMENTATION	68
6. TESTING	70
7. EVALUATION	74
8. CONCLUSION	76
9. FUTURE WORK	78
10. REFERENCES	79
11. APPENDICES	81
