A thesis submitted to the Department of Software Engineering, Bahria University, Islamabad in the partial fulfillment for the requirements of a Master's degree in Software Engineering

April 2015

## **ABSTRACT**

It is observed that examinations held at educational institutions globally are conducted on periodical basis. We, being inhabitants of the Computer Age, have deployed automated examination systems where schools of students can take the same exam on parallel test schedules with instant report generation evaluating their test performance. The major underlying theories for these tests are response theories. This research analyzes and compares the response theories such as “Item Response Theory” (IRT) and “Classical Test Theory” (CTT). Included in this research is literature reviews consisting of CTT and IRT background knowledge and previous works done in this field. An in-depth study was conducted on all “Item Response Theory” Para models (namely IRT-One Para model, IRT-Two Para model, and IRT-Three Para model) along with their parameters for ability, discrimination and probability respectively to present an improved Para model; “Time IRT” Model or TIRT Model. In the proposed fourth model, i.e. TIRT model, the response and the response time calculations are taken as to be associated with distinct parameters.

## CERTIFICATE OF ORIGINALITY

This is to certify, that I am solely responsible for the work conducted and submitted ~~for~~ this thesis, that the ~~original work is~~ contents are original and my own unique (except whereas specified in acknowledgments or in footnotes), and that neither the thesis nor any portion of the work referred to in ~~this~~ the thesis has been submitted in ~~support~~ provision of an application for ~~another degree or qualification of this or any other university or other institution of learning for a degree~~ other degree or qualification programs in-bounds and out-bounds of this institution.

## **COPYRIGHT STATEMENT**

1. The author of this thesis (including any appendices and/or schedules to this thesis) owns any copyright in it (the “Copyright”) and he has given Bahria University, Islamabad the right to use such Copyright for any administrative, promotional, educational and/or teaching purposes.
2. Copies of this thesis, either in full or in extracts, may be made only in accordance with the regulations of the Bahria University Library. Details of these regulations may be obtained from the Librarian. This page must form part of any such copies made.
3. The ownership of any patents, designs, trademarks and any and all other intellectual property rights except for the Copyright (the “Intellectual Property Rights”) and any reproductions of copyright works, for example graphs and tables (“Reproductions”), which may be described in this thesis, may not be owned by the author and may be owned by third parties. Such Intellectual Property Rights and Reproductions cannot and must not be made available for use without the prior written permission of the owner(s) of the relevant Intellectual Property Rights and/or Reproductions.
4. Further information on the conditions under which disclosure, publication and exploitation of this thesis, the Copyright and any Intellectual Property Rights and/or Reproductions described in it may take place is available from the Head of Department of Software Engineering, Bahria University, Islamabad.

## ACKNOWLEDGMENTS

*“You have to give yourself credit,  
Not too much because that would be Bragging.”*

— Frank McCourt, Teacher Man

Thanks to ALLAH almighty, I have been bestowed with countless and incomprehensible blessings to achieve this revolutionary feat today. Afterwards Coherently, it was all made possible due to my parent<sup>s</sup>' prayers and support.

I am greatly indebted obliged to my thesis supervisor “**Dr. Tamim Ahmad Khan**”. Without his personal supervision, advice and valuable guidance, the completion and the quality of this very thesis would have been doubtful been termed questionable and doubtful. I am deeply indebted to him for his encouragement and continual recurrent help during this work.

I would also like to thank you to my colleagues for encouraging and motivating me, regardless of any requests. In the While making of compiling this thesis report, the online research community also played a very vital role was very helpful too. I have tried the best to express my gratitude and appreciation to all those who gave me the possibility and courage to complete this thesis report where deemed mandatory.

Thanks you!

## Dedications

The family is one of nature's masterpieces.  
~George Santayana

~~I dedicate my thesis work to my family and friends. A special feeling of gratitude to my loving parents, for their endless love, support and encouragement. This thesis is dedicated to my parents for their boundless support, love, prayers and blessings throughout countless days and nights. I would also like to dedicate this work to my friends and colleagues without whom, despite their recommendable suggestions, this feat would have been achieved earlier.~~

LIST OF TABLES.....	ix
LIST OF FIGURES .....	x
Chapter 1.....	1
Introduction.....	1
1.1. Motivation.....	1
1.2. Problem statement .....	2
1.3. The aims and objectives.....	2
1.4. Thesis organization.....	2
Chapter 2.....	7
Background and Literature Review.....	7
2.1. Classical Theory.....	7
2.2. Item Response Theory.....	8
2.4. Comparison between Classical Test Theory and Item Response Theory .....	12
Chapter 3.....	24
IRT and TIRT (Time based IRT) .....	24
Chapter 4.....	29
Implementation .....	29
4.3. TIRT, Reliability and Standard Error.....	31
4.4. Testing.....	33
Graphical result was generated and of both the IRT and TIRT, compared and then validated through standard method and also through expert opinion. The result is shown below:.....	35
4.5. Result.....	36
Chapter 5.....	38
Conclusion .....	38
