ACKNOWLEDGEMENTS

We would like to thank everyone who had contributed to the successful completion of this project. We would like to express my gratitude to my project supervisor, Miss Shaista Ashraf for his invaluable advice, guidance and his enormous patience throughout the development of the research.

In addition, we would also like to express our gratitude to our loving parents and friends who have helped and given us encouragement.

PAKLANCE WEB APPLICATION
ABSTRACT

The rapid growth of independent work and the need for remote collaboration have led to the development of platforms that support teamwork on large-scale projects. Existing freelance platforms often struggle to facilitate effective coordination and communication among team members working on the same project.

This project introduces Paklance, a web application designed to address the limitations of existing freelance platforms and provide enhanced collaboration capabilities for clients and freelancers. Paklance is a centralized platform where clients can hire multiple freelancers to foster teamwork. The proposed system integrates features such as team collaboration, real-time communication, and project management tools.

The necessity determined the system's architecture, defining the useful and non-practical parts of the system. The system is designed to capture the interactions between users and the system, capturing the essence of team formation, communication, and project collaboration.

By implementing Paklance, clients will benefit from a streamlined process for hiring and managing multiple freelancers on a single project, ensuring effective collaboration and improved project outcomes. Freelancers will have the opportunity to work as a team, enhancing their collective skills and fostering productive collaboration. The future potential of freelance work and remote collaboration is explored, highlighting the importance of platforms like Paklance in facilitating efficient teamwork.

Overall, this project aims to provide a comprehensive freelance platform that enables clients and freelancers to work together effectively, achieving better outcomes for large-scale projects. The proposed system offers enhanced communication tools, and efficient project management, facilitating collaboration in an increasingly remote and collaborative work environment.
