ACKNOWLEDGEMENTS

We would like to thank everyone who had contributed to the successful completion of this project. We would like to express my gratitude to my research supervisor, Mr Sagheer Ahmed for his invaluable advice, guidance and his enormous patience throughout the development of the research.

In addition, we would also like to express our gratitude to our loving parents and friends who had helped and given me encouragement.

EVENTS BOOKINGS AND CO.

ABSTRACT

The primary objective of this project is to develop a sophisticated web-based platform, is to streamline the event management process. By focusing on user convenience, the platform aims to simplify venue searches based on availability and location, while also providing a seamless ticket booking experience. The platform offers a user-friendly interface that allows users to search for available venues based on their desired criteria efficiently. The seamless ticket booking system ensures a smooth experience, with unique tickets generated for each booking to prevent unauthorized access. Security is a top priority, with scanned tickets verified against a database to eliminate the possibility of reuse or duplication. For sellers, the platform provides a dynamic interface that enables real-time updates to venue availability and pricing. Event organizers and catering service providers also benefit from the platform's effective management tools, allowing them to easily list and manage their events and services. In addition to these core features, the platform will incorporate advanced functionalities to enhance the user experience and improve efficiency. By combining these features, the project aims to become a comprehensive solution for event management, providing a user-friendly, efficient, and secure platform for both users and sellers.
