Supervised by

Ma'am Anam Usman

Session: 2010 – 2014

A Report is submitted to Department of Computer Software and Engineering
Bahria University, Islamabad
In partial fulfillment of requirement for the degree of BCE

Dedication

We would like to dedicate this project to our loving parents who have been a constant support and shoulder to rely on. They have given us inspiration to tackle each and every task with enthusiasm and determination. Their love, affection and belief in us have made us push our limits and aim to aspire a lot more in life.

Acknowledgements

We thank Allah (SWT) for His countless and endless blessings for guiding us and everyone who helped us during the graduation project starting with endless thanks to our supervisor Ma'am Anam Usman for providing our group with valuable information and advices. Thanks for the continuous support and kind communication. We dedicate this project to our parents and our supervisor Ma'am Anam Usman.

Abstract

Age related macular degeneration (ARMD) is a medical condition which results in deterioration of human retina and in particularly macula. It is caused due to deposits of drusen on the retina and the disease may cause severe blindness. It is important to detect ARMD in its early stages to save patient's vision.

In this project, a new technique for drusen detection from fundus images by using Gabor kernel based filter bank is used. Spurious regions are eliminated which may be confused with drusen. The system consists of phases like preprocessing, bright region detection, optic disc detection, removal of optic disc and finally AMD detection using drusen regions.

The system is evaluated by testing it on STARE database using performance factor like accuracy. We have achieved 98% accuracy on this system. The results show the comparison and validity of our system with existing techniques.

Abstract	iv
Table of Contents	v
List of Figures	viii
List of Tables	x
1. Introduction	1
1.1 Motivation	2
1.2 Scope and Objectives	3
1.3 Challenges Faced	3
1.3.1 Detection of optic disc	3
1.4 Detection of drusen	4
1.5 Structure of Thesis	4
2. Age Related Macular Degeneration	5
2.1 Structure of eye	5
2.1.1 Structure of the retina	6
2.2 Retinal Diseases	7
2.2.1 Diabetic Retinopathy	7
2.2.2 Diabetic Macular Edema (DME)	7
2.2.3 Glaucoma	8
2.2.4 Anterior ischemic optic neuropathy (AION)	
2.3 Age Related Macular Degeneration (ARMD)	9
2.3.1 Types of ARMD	9
2.3.2 Cause and symptoms	10
2.4 Drusen	10

2.4.1	Types of Drusens	10
2.5	Treatment of AMD	11
3.	Literature Review	12
4.	Implementation / Design	18
4.1	System overview	18
4.2	Image acquisition	19
4.3	Image enhancement and bright region detection	19
4.4	OD detection and Removal	22
4.5	AMD detection	23
5.	System Testing and Evaluation	30
5.1	Dataset	30
5.1.1	STARE	30
5.2	OD Segmentation Results	31
5.3	Drusen Segmentation Results	32
5.4	Processing Time of Proposed System	34
6.	Conclusion	35
8.	References	36
