ACKNOWLEDGEMENT

All the praises are attributed to the sole creator of the whole universe Almighty **ALLAH**, the Most Beneficent, the Most Merciful and The Most Compassionate, Who bestowed on me the power of vision and wisdom to unravel the mysteries of the universe in a more systematic way what people call it SCIENCE. It is only by the grace of ALLAH Almighty that makes me able to material contribution to already existing ocean of knowledge.

I invoke Allah's blessings and peace for my beloved Prophet **MUHAMMAD** (Peace Be upon Him), who is forever torch of guidance and knowledge for humanity as a whole and whose moral and spiritual teachings enlightened my heart and mind, I wish to extend the most sincere thanks and deep sense of obligations to my supervisor, **Dr. Humera Farah** (Professor), Department of Earth & Environmental Sciences, Bahria University, Islamabad (Pakistan). This manuscript has found its way to a significant completion due to his dynamic supervision and masterly advice.

I feel much pleasure to express the heartiest gratitude and sincere appreciation to **Dr. M, Zafar** for his generous guidance, kind behavior, cooperation and valuable suggestions on this piece of work. In spite of his multifarious duties I enjoyed his friendly company which made the research period unforgettable era. I wish to record my sincere appreciation to **Dr. Shair Jamal** (Associate Professor) and **Dr.Ejaz Ahmed** (WWF).

The author is very thankful to Mr. Tahawar Hussain (farmer Director, AEDB) and Mr. Yasir Ayub (Project Engineer), Alternative Energy Development Board for his scholarly guidance and untiring help for successful completion of research. It is very appreciation to record my and thanks for Mr.M.Tahseen Professor(Department of Geography), Mr. Ashtar (Professor), Mr. Usman Sial, Mr. Sheeraz Khan, Mr.Khurram Mustifa, Mr.M.Khubab Abuzer, (Assistant Professor)) and Mr. Aamir Abbasi (Lecturer) for their moral support, encouragement and critical insight during some tough hours of research. Their love and inspiration is always a source of inspiration for me. This piece of acknowledgement is incomplete without expressing my obligation and indebtedness to my affectionate Parents, Brothers and Sisters, for their encouragement, moral and financial support during the period of research and studies and their day and night prayers which contributed a lot to achieve the present position.

SHAHID MAHMOOD

ABSTRACT

This study examines the possibility to produce cost effective biodiesel through jatropha, an energy crop, and its promising effects on the prevailing energy crisis in Pakistan. It also investigates the level of awareness about biodiesel among various public groups in the country.

The consistent price hike of all fossil fuels is a perilous blow to the energy sector and the economy of a developing nation like Pakistan. For instance, a huge quantity of diesel alone, almost 8 million tons, is consumed in Pakistan annually; 4 million tons among them are imported, burdening the country's ever looming foreign reserves. Consequently, Pakistan may opt for alternate fuels such as biodiesel as one of possible solutions of this issue.

The province wise availability and suitability of various types of lands for jatropha cultivation and its current plantation status have thoroughly been explored. The research demonstrates that approximately 28, 899, 2000, 0 liters of biodiesel may annually be retrieved from jatropha cultivated on barren lands alone in Pakistan. Moreover, the cost of the biodiesel could be as low as Rs. 42 per liter, costing almost half than the petro diesel. Additionally, this biofuel may assist improving some of serious environmental issues of the country due to its environment friendly characteristics. In general, the production of biodiesel may assist in decreasing unemployment in the country.

The findings of this work also reveal that awareness level of the ordinary people on biodiesel and its applications is presently minimal and shallow. Therefore, a comprehensive national media campaign including internet, may be required to raise public knowledge towards using this alternate fuel.
