INTRODUCTION

1.1	General Introduction	02
1.2	Summary of Seismic Lines	03
1.3	Kal Well # 1	05
1.4	Location	07
1.5	Petroleum Prospects	07
	1.5.1 Source Rocks	07
	1.5.2 Reservoir Rocks	07
	1.5.3 Cap Rocks	07
1.6	Objectives Of Research	07

Chapter 2

GEOLOGY OF THE AREA

2.1	Regional Tectonic Settings	10
2.2	Potwar Plateau	11
2.3	Structural Division	12

Chapter 3

STRATIGRAPHY OF KAL AREA

3.1	Stratigraphy	17
	3.1.1 Chinji Formation	17
	3.1.2 Kamlial Formation	17
	3.1.3 Murree Formation	18
	3.1.4 Chorgali Formation	18
	3.1.5 Sakesar Formation	20

3.1.6	Nammal Formation	20
3.1.7	Patala Formation	20
3.1.8	Lockhart Formation	21
3.1.9	Hangu Formation	21
3.1.10	Sardhai Formation	21
3.1.11	Warcha Formation	21
3.1.12	Baghanwala Formation	22
3.1.13	Jutana Formation	22
3.1.14	Kussak Formation	22
3.1.15	Khewra Formation	22
3.1.16	Salt Range Formation	23

Chapter 4 PETROLEUM GEOLOGY OF THE AREA

4.1	Hydrocarbon Entrapment in Potwar	26
4.2	Hydrocarbon Potential of Cambrian Rocks	30
4.2.1	Regional Distribution of Cambrian Rocks	30
4.2.2	Tectonic and Depositional Setting of Cambrian	30
4.3	Source Rocks	30
4.4	Reservoir Rocks	31
4.5	Traps	31
4.6	Burial History	31

Chapter 5 SEISMIC METHODS

5.1	Seismic Waves	36
5.1.1	Body Waves	36
5.1.1.1	P-Waves	36
5.1.1.2	S-Waves	36
5.1.2	Surface Waves	36
5.1.2.1	Love Waves	36
5.1.2.2	Rayleigh Waves	36

5.2	Movement of Seismic Waves	37
5.2.1	Snell's Law	37
5.2.2	Huygen's Principle	37
5.2.3	Fermet's Principle	37
5.3	Seismic Velocities	37
5.3.1	Average Velocity	38
5.3.2	Interval Velocity	38
5.3.3	Root Mean Square (RMS) Velocity	38
5.3.4	Stacking Velocity	39
5.4	Factors Affecting Velocity	39

6.1	Introduction	41
6.2	Seismic Reflection and Refraction Surveys	42
6.3	Spread Geometry	42
6.4	CDP Method	43
6.5	Energy Sources	43
6.5.1	Impulsive Energy Sources	43
6.5.2	Non Impulsive Energy Sources	45
6.5.2.1	Vibroseis Source	45
6.6	Detection and Recording of Seismic Waves	45
6.6.1	Geophones	45
6.6.2	Seismic Cable	46
6.5.3	Recording Stage	46
6.5.3.1	The Analogue Recording System	47
6.5.3.2	The Digital Recording System	47
Chapter 7	SEISMIC DATA PROCESSING	
7.1	Processing Sequence	49
7.1.1	The Preliminary Stack	49

7.1.2	Parameters Optimization	49
7.1.3	The Final Stack	49
7.2	Demultiplexing	49
7.3	Filtering	50
7.4	Geometry Definition	50
7.5	Editing of Bad Traces	50
7.6	Datum Statics Correction	51
7.7	CDP Sort	51
7.8	Deconvolution	51
7.9	Velocity Analysis	51
7.10	Automatic Gain Control (AGC)	51
7.11	Stacking	52
7.12	NMO Correction	52
7.13	Migration	52
Chapter 8	SEISMIC DATA INTERPRETATION	
8.1	Introduction	54
8.1.1	Structural Analysis	55
8.1.2	Stratigraphic Analysis	55
8.2	Time Section	56
8.3	Depth Section	56
8.4	Reflection Selection	56
8.5	Average Velocity Mean Line Method	57
Chapter 9	CONCLUSIONS	80
Chapter 10	REFERENCES	82

ABSTRACT

The Seismic lines (952-GJN-52, 942-GJN-51, 942-GJN-48, 942-GJN-47 and 942-GJN-46) were obtained from Directorate General of Petroleum Concessions (DGPC). These lines were shot by OGDCL in 1994 and 1995 in Kal area, which is located 08 Km South West of Rajian Oil Filed and 16 Km east of Chak Naurang Oil Fields in Gujjar Khan E.L. For interpretation of these Seismic sections, reflectors were marked on the basis of prominent reflection from subsurface horizon due to change in lithology and diffraction from deformed strata. Three prominent reflectors R1, R2 and R3 were marked on the seismic sections on the basis of observed reflection events. The velocity information is in the form of average velocity at different time and is provided at selected CDP'S. Using the velocity panels given on seismic section for selected CDP'S an average velocity selected from seismic section arrival time (two Ways) of marked reflectors, is determined. Using these arrival times and the estimate velocity the depth of each reflector has been calculated and is represented in the depth section. The TWT were posted on the base map to make a time contour map. Shales of the Patala Formation are the source rocks. Sandstone of Khewra Formation of Cambrian age and Limestone of the Sakesar Formation of Eocene age are reservoir rock. The shale of the Chorgali and Kussak formation serve as the cap rocks for underlying limestone of Sakesar and sandstone of Khewra reservoirs respectively
