ABSTRACT

The main objective of the research is to design an effective workflow representation and defining a model for intelligent and robust execution of workflows. An effective and powerful representation of workflows is formalized by comparing and analyzing different workflow representational techniques. The aim is to identify the pros and cons associated with them and hence modify the existing techniques appropriately to rectify the associated problems to acquire the workflow representation in much more detail and expressive way. The comparison and analysis of Petri-Nets and UML activity diagram directs us to use both of them hand in hand under the concept of CIMOSA- Workflow (C-Wf) model to represent the workflow through workflow activity diagram. C-Wf model and workflow activity diagram are then appropriately modified to rectify the identified problems and to provide more expressive, effective and powerful representation of workflows. The research also aims to provide an intelligent solution and algorithm for the execution of a workflow process by ensuring the data consistency, correctness, completeness among various tasks involved. The proposed solution provides a synchronized execution of a workflow activity, free of failure among various tasks involved in a workflow process. A synchronizing agent is bound at a very low level, i.e. with the workflow activity to assure the execution of task robustly. An algorithm is also provided to show the complete execution of workflow process. The research enhances the capabilities of workflow management systems by improving the expressiveness of workflows and by providing robust execution of workflows.

TABLE OF CONTENTS

Chapters	Pages
1- Introduction	1
1.1- Introduction and Motivation	1
1.2- Problem Definition	2
1.3- Objectives	2
1.4- Structure of the Report	3
2- Workflow Management Systems: A Review	4
2.1- Introduction	4
2.2- Components of Workflow Management Systems	5
2.3- Distributed Workflows	7
2.4- Advantages of WFMS	9
2.5- Summary	10
3- Workflow Representation: A Review	11
3.1- Introduction	11
3.2- Basic Constructs of Workflows	11
3.3- Petri-Nets	13
3.4- UML (Unified Model Language)	15
3.4.1- Activity Diagram	16
3.5- Petri-Nets vs. UML Activity Diagram	18
3.6- C-Wf Model	20
3.7- Workflow Activity Diagram	21
3.8- Meta-Process Model	23
3.9- Problems with Existing Workflow Representation	26
3.10- Discussion	27
3.11- Summary	28

4-	Workflow Execution: A Review	29
4.1-	Introduction	29
4.2-	Factors Affecting Workflows in Execution	29
4.2.1-	Distribution of Data	29
4.2.2-	Accessing Distributed Data	30
4.2.3-	Connection Types for Network Services	31
4.2.4-	Network Speed	32
4.3-	Workflow Intelligence	33
4.4-	ECA Model for Workflow Execution	35
4.5-	Transactional Behavior of Workflows	36
4.6-	Data Synchronization and Consistency related Issues in Distributed Workflows	37
4.7-	Problems with the existing solution	38
4.8-	Discussion	40
4.9-	Summary	40
5-	Proposed Workflow Representation	41
5.1-	Introduction	41
5.2-	Proposed Workflow Representation	41
5.2.1-	Solving the Problem of Missing Sub-Workflow Representation in C-Wf Model	41
5.2.2-	Solving the Problem for Defining the Stereotype for Sub-Workflows	43
5.2.3-	Solving the Problem of Maintaining State of Parent-Child workflows	43
5.3-	Discussion	44
5.4-	Summary	44

6-	Proposed Model for Intelligent Workflow Execution	45
6.1-	Introduction	45
6.2-	Proposed Solution	45
6.3-	Designed Synchronizing Agent	45
	6.3.1- Components and working of synchronizing agent	46
6.4-	Designed Workflow Activity	48
6.5-	Proposed Workflow Activity in Light of ECA Model	48
	6.5.1- Components and working of Workflow Activities	49
6.6-	Proposed Model and Algorithm for Intelligent Workflow Execution	50
	Step1- Loading and Configuring Workflow Process	50
	Step2- Execution of Workflow Process	51
	Step3- Signaling Workflow Completion to Workflow Server	54
6.7-	Discussion	55
6.8-	Summary	55
7-	Conclusion	56
7.1-	Contribution towards Workflow Representation	56
7.2-	Contribution towards Workflow Execution	57
7.3-	Future Work	58
	References	59
