First of all I am indebted to my Creator, the Most Beneficent and the Most Merciful –He the one who truly made me competent enough to complete this research.

I would also like to thank my thesis advisor Sir M. Jiyad Sheikh for his guidance, support and help in completion of this thesis.

I would also like to thank all the teachers who have helped and guided me during the course of this research work. Without their help I would have never been able to complete my thesis on time.

Abstract

Purpose of the study: The purpose of this study is to find out that how reuse, redesign, remanufacture and recycle help reverse logistic to enable sustainability.

Research method/sampling- Deductive approach was followed .Quantitative data is collected through questionnaires on a five point likert scale. Stratified random sampling technique is used. A total of 100 questionnaires were distributed and data of 100 questionnaires was used in the analysis. The data was analyzed using SPSS. Friedman Test and Cronbach's Alpha is used.

Findings of the research: The findings of this research advocate that the all the five drivers have a significant positive relationship with reverse logistic in enabling sustainability.

Practical implications of the research: This research can guide that reverse logistics is now booming with enormous pace and has highly great importance these days in FMCG sector, majorly those companies who can provide their customer and society a polluted free environment will build positive image in minds of customer and which will lead to improvement in bottom line of the company.

Keywords: Reverse Logistics, Sustainability, Reuse, Redesign, Remanufacture, Recycle, Just In Time, Bottom Line Effect, Supply Chain Management, Logistics, FMCGs and Green Supply Chain Management.
