ABSTRACT

The Art Institute Online Examination system is a comprehensive software that monitors the perfect data flow. It is programmed in such a manner so as to provide the user, the easiness and usability in storing student records regarding the registration, assignments and examination. The operator needs not to worry about the compilation of results. There is also an ease to generate results automatically.

The Online Testing system is a complex but user-friendly system. It has made the distance learning education system a reality. One can easily register online and appear for the exam online. The instructor is provided with the facility to create the exam paper online too. This software is maintained by a DBA (Database Administrator) who is responsible for over viewing the working of the system. He can create and manage teacher and student accounts and take backups, eradicating human errors. Hence, this software aims to overcome all the difficulties offered by a manual examination system.
