Abstract

This is a development-oriented project. I have chosen the "Shopping Arcade (SA) Software Management System" of the Jan's Shopping Arcade for this Project.

The purpose of this software is to make the Arcade system Computerized. The existing System of Jan's Arcade is manual and is inefficient. All the Task are done manually and there is plenty of problems in that system, like Accounts maintenances are difficult; purchase record keeping is not accurate. Sale memos are not maintained and many more. The purpose of this project is also to let the people purchase things while sitting in the their home or office.

To automate and facilitate the use and management of shopping system, Jan's Shopping Arcade needs software like "Shopping Arcade Management System".
