

# GUI TEST CASE MINIMIZATION USING EVENT FLOW MAPS

By

Raheela Ambrin

Enrollment No: 01-244151-043

Supervised By

Dr. Tamim Ahmed Khan

A thesis submitted to the Department of Software Engineering, Faculty of Engineering Sciences, Bahria University, Islamabad in the partial fulfillment for the requirements of a Masters degree in Software Engineering

June 2017

# APPROVAL SHEET

## THESIS COMPLETION CERTIFICATE

Scholar's Name: Raheela Ambrin Registration No: 39444  
Program of MS Software Engineering  
Study:  
Thesis Title: GUI TEST CASE MINIMIZATION USING EVENT FLOW MAPS

It is to certify that the above student's thesis has been completed to my satisfaction and, to my belief, its standard is appropriate for submission for Evaluation. I have also conducted plagiarism test of this thesis using HEC prescribed software and found similarity index at 5% that is within the permissible limit set by the HEC for the MS/MPhil degree thesis. I have also found the thesis in a format recognized by the BU for the MS/MPhil thesis.

# CERTIFICATE OF ORIGINALITY

This is certified that the intellectual contents of the thesis GUI TEST CASE MINIMIZATION USING EVENT FLOW MAPS are the product of my own research work except, as cited property and accurately in the acknowledgements and references, the material taken from such sources as research journals, books, internet, etc. solely to support, elaborate, compare and extend the earlier work. Further, this work has not been submitted by me previously for any degree, nor it shall be submitted by me in the future for obtaining any degree from this University, or any other university or institution. The incorrectness of this information, if proved at any stage, shall authorities the University to cancel my degree.

# ABSTRACT

GUI testing is an important aspect of conventional software testing where we intend to execute underlying functionality considering business requirements. Regression testing verifies if software previously developed and tested still performs correctly after it was changed or incorporated with other software components. Some modules that are changed perform all the functionality correctly and are verified as well as validated.

Test case minimization techniques are used to minimize the testing cost in terms of execution time, resources through reducing number of test cases. We generate a set from test suite that satisfies all the requirements of original test suite with minimum number of test cases.

We propose sequence recording technique to report coverage and present a test case minimization using our sequence recording. To evaluate our proposal, we developed application to perform analysis and show results. It is type of manual testing approach in which sequence of events are recorded.

All the recorded events are clustered using data mining algorithm K-Means and similar clusters are grouped together. After clustering search sequence is performed and all the test cases that are generated are listed based on size.

Our results are comparable with Microsoft coded UI framework test engine results. We generated the UI map from Microsoft coded GUI in visual studio in which all interface components are verified and compare this UI map with our event map and hence proved that there is no change in sequence when the user visits GUI.

Test case minimization is performed based on which short sequence test cases are on the top in the list and the test cases that contain longer sequence are listed afterwards. This create ease for the tester and able to evaluate all the test cases and it saves time and execution of test cases.

# **DEDICATION**

I am dedicating this thesis to most beloved people, a special feeling of gratitude to my loving parents. Thank you both for giving me strength to chase my dreams and for your full support and motivation.

## **ACKNOWLEDGEMENTS**

A special thanks to my supervisor for his efforts and dedication on my research work, who are more than generous with their expertise and precious time. Thanks to him for hours of reflecting, reading, encouraging throughout the entire process. I would like to acknowledge and thanks my university for allowing me to conduct my research and providing any assistance requested.

## TABLE OF CONTENTS

<b>Approval Sheet</b> .....	<b>i</b>
<b>Certificate of Originality</b> .....	<b>ii</b>
<b>Abstract</b> .....	<b>iii</b>
<b>Dedication</b> .....	<b>iv</b>
<b>Acknowledgments</b> .....	<b>v</b>
<b>Table of Contents</b> .....	<b>vi</b>
<b>List of Figures</b> .....	<b>viii</b>
<b>List of Tables</b> .....	<b>ix</b>
<b>Abbreviations</b> .....	<b>x</b>
<b>Chapter 1</b> .....	<b>1</b>
Introduction	
1.1. Motivation .....	4
1.2. Problem statement .....	4
1.3. Aims and Objectives .....	5
1.4. Contribution.....	5
1.5. Thesis Organization.....	5
<b>Chapter 2</b> .....	<b>6</b>

# **ABBREVIATIONS**

PMS: Profile Management system

MBT: Model Based Testing

EFG: Event Flow Graph

FA: Finite Automata

ESG: Event Sequence Graph

GUI: Graphical User Interface

UI: User Interface

DART: Daily Automated Regression Tester

AUT: Application Under Test

SUT: System Under Test

SM: Systematic Mapping

GQM: Goal Question Metric

UML: Unified Modelling Language

ACO: Ant Colony Optimization

MLRT: Multiple level regression testing technique

HGS: Harrold Gupta Sofa (Testing algorithm)

CUIT: Coded UI test

TFS: Team Foundation Server

QTP: Quality Test Professional
