**ABSTRACT**

Harrod Domar model for economic growth is mathematical explanation for an economy to grow and develop by applying the basic factors like saving, investment and capital formation. A developing country like Pakistan it is difficult to grow easily because of internal and external factors. This research is basically designed to find a relationship among these factors and to sort out a reasonable rate for economic growth. Public satisfaction is the key result of development of a country, growth is the step towards the development finally destination which is Public Satisfaction.
