Abstract

The world has progressed with various new and integrated technologies especially in the field of computer science. With new advancement, smart phones applications also gained popularity to provide services to the user anytime and anywhere. Various types of android phone applications have designed to facilitate the users. [3]

Recently, the most of the users are looking for smart application to save their time with convenience and comfort. In this context, we are designing an application for the android users so they can see different deals and discounts information about food and garments etc. from any place without going to specific store or restaurant and decide accordingly.

In proposed application, first users can see the deals information on their mobile phones and they will be going to the market in order to purchase or buy their desire item. This application is based on GPS (Global Positioning System) for tracking the user location, and check the nearby brands outlet within range of 2-km. In addition, if the specific store or restaurant is fall in that specified area then application will send the notification to the customer.
