A thesis presented to the Department of Management Sciences, Bahria University
Karachi Campus, in partial fulfillment of the requirements
of the MBA degree

SPRING, 2017

Bahria University Karachi Campus

ACKNOWLEDGEMENT

This academic research thesis is only made possible through ample support and guidance of all associates of management sciences who made us understand research concepts and importance. Particularly, I'd like to appreciate the contribution of my supervisor, Sir. Khurram Adeel Sheikh, for his guidance and supervision throughout the semester and his constructive feedback regardless of various other duties, was available for the guidance and discussion whenever I needed most.

I'd also like to thank the administration of Bahria University that has provided me with this very opportunity to complete this research successfully.

Lastly, I'd like to acknowledge the members of my family that have always supported me in each phase of my life especially academic phase. All the members of my family have shown complete endurance during the whole research. I am highly thankful for the support and love that they have bestowed on me.

ABSTRACT

This research study shades light on the effectiveness of online social networking sites in the context of interactive digital marketing and virtual brand community and the influence of users' motivation to engage in social media marketing.

The study methodology and design is explanatory as the numerical data and theoretical background was already established and existed. It further investigates by reviewing past researches and explain the existing theory by adopting convenient sampling technique and targeting students of Karachi as sample population.

The conceptual framework consisted of user motivation for online social networking and their perception, attitude and participation intent towards advertising and virtual brand community.

Two types of user motivation are taken into account; social online capital and psychological well-being and two aspects of social media marketing; interactive digital advertising and virtual brand community. The targeted social networking site for data collection was Facebook and a survey conducted from 176 university students in Karachi reveals that respondents tend to differ and favor virtual brand communities' more than interactive digital advertisement.

These results have key implications to understand the beliefs of growth is social media and digital marketing scenario by assessing online social capital of social media users and how their perception, attitude and intention to participate differs. Promoting Marketers' orientation is very challenging under the context where two beliefs exist but valid data and information provided both the advantages and disadvantages.
