Table of Contents

Chapter 1	6
INTRODUCTION	6
1.1 Textile Industry in Pakistan:	10
1.2 Problem statement:	13
1.3 Research Questions:	13
1.4 Research Objective:	14
1.5 Significance of the study:	15
1.6 Quantification of Lean Manufacturing:	16
Chapter 2	19
LITERATURE REVIEW	19
2.1 Firm Performance:	20
2.2 Firm size & Firm Performance:	22
2.3 Information Sharing & Firm Performance:	24
2.4 Collaboration & Firm Performance:	25
2.5 Supply Chain Performance:	28
2.6 Theoretical Framework:	29
2.7 Hypothesis development:	29
Chapter 3	31
METHODOLOGY	31
3.1 Nature of research:	31
3.1.1 Population:	31
3.1.2 Sample frame:	32
3.1.3 Sample:	32
3.1.4 Sampling technique:	33
3.1.5 Unit of analysis:	33
3.1.6 Instrument:	33
3.1.7 Data collection technique:	33
3.1.8 Data collection method:	33
3.1.9 Analysis technique:	34
3.1.10 Analyst tool:	34
Chapter 4	35
ANALYSIS & RESULTS	35
4.1 Descriptive:	35
4.2 Reliability and Validity:	37

4.2.1	<i>Cronbach Alpha:</i>	37
4.3	<i>Factor Analysis:</i>	38
4.3.1	<i>KMO and Bartlett's Test:</i>	38
4.4	<i>Correlation:</i>	40
4.5	<i>Regression for Hypothesis Testing</i>	41
4.6	<i>Results:</i>	43
Chapter 5		44
DISCUSSION & IMPLICATIONS		44
5.1	<i>Conclusion:</i>	45
5.2	<i>Recommendations:</i>	45
5.3	<i>Limitations of the study:</i>	46
Appendix		48
Questionnaire		48

ACKNOWLEDGEMENTS

“In the name of Allah the most beneficent, the merciful”

I am very thankful to Allah almighty for providing this opportunity to explore and all His countless blessings that are on us and our families. Then I would like to thank my parents and my teachers especially without their support and prayers, this research would not have been possible. A special thanks to my parents that they supported me in every thick n thin and I was able to complete this.

A special and heartiest thanks to my supervisor Dr. Bakhtiar Ali, who has been a continuous source of inspiration and a live guidance and a source of motivation at all steps during this research. Also I would like to thank Mr. Mohsin Zahid for his support and help for this thesis. My teachers guided me with immense knowledge and motivation to complete this thesis. Without their support this would not have been possible.

I would also like to thank Bahria University Islamabad Campus that they provided us with all the facilities and support during this program and our HOD Dr. Ali Saeed. I would also like to thank my friends who helped me in completing this research. Thank you all, without your love and support I would not have been able to do this research.

Abstract

Competition is increasing day by day and modern ways of doing business are also changing and continuously evolving. For a successful business, the organizations try to increase their efficiency and effectiveness both in the terms of management and production operations. One of the main reason for a business to be successful and grab more and more market share, business can try to minimize their waste. Waste is any-thing that is unable to add value to products or services or any of the operations or the value system of the organization. Supply chain management is a broader aspect and focuses on the efficient management of the supply chain that starts from procurement process and ends to the point where the product or service is finally delivered to the end customer/consumer. Supply chain has many dimension and two dimension leading to this research are information sharing and collaboration. Information sharing between the partners in the supply chain is very important and this becomes a base for the lean manufacturing. Collaboration between the parties of the supply chain is also of utmost importance and this research focuses on these both dimensions leading to lean manufacturing. Lean manufacturing is a concept that has evolved over last decade and is a way of removing waste from the business and organizations. It is a continuous process and this concept evolved from the Toyota Production System. Many organizations are implementing these techniques into their operations and are getting more and more benefits out of it as it reduces the costs and also increases efficiency. This research has focused mainly on the core concepts of lean manufacturing and its quantification in the textile industry of Pakistan.

Keywords: Lean manufacturing, Value system, Supply chain management, information sharing & collaboration.
