

**ANALYSIS OF SELF-ASSESSMENT SKILLS OF NOVICE SOFTWARE
DEVELOPERS WORKING IN PROFESSIONAL SOFTWARE
DEVELOPMENT INDUSTRY**

A thesis submitted to the Department of Software Engineering, Faculty of Engineering Sciences, Bahria University, Islamabad in the partial fulfillment for the requirements of a Masters degree in Software Engineering

March 2018

Abstract

Measuring and evaluating learner learning ability is always the focus of every person whose aim is to develop strategy and plans for their learners to improve learning process. There are different methods and tools to accomplish this task like classroom assessment, self-assessment through computer systems such as Intelligent Tutoring Systems (ITS) etc. One of these methods is assessment of metacognition. Metacognition has been defined as the capability to judge and monitor self-learning. On the basis of this judgment individual can suggest the changes required to improve their learning. Research has shown that learners who have the ability to monitor their cognitive skills are more proficient in managing their knowledge about some subject, by monitoring, developing and planning their activities. There has been a considerable research on the assessment of learner's metacognitive and self-assessment skills and abilities in the academic domain, but no study has been conducted to evaluate the mistakes which novice developers make because of underutilization of self-assessment abilities. The aim of this study is to assess the metacognitive skills and abilities of novice software developers working in the industry and to describe the consequences of awareness of metacognition on their performance. In this study we conducted an experiment with novice software developers and collected data using Devskiller and a self-assessment log to analyse their use of self-regulation skills. The study showed that when developers are asked to reflect upon their work, they become more informed about their habitual mistakes and using a self-assessment log helps them highlight their repetitive mistakes and experiences which allows them to improve their performance on future tasks.

Contents	4
List of Figures	6
List of Tables	7
Chapter 1	8
Introduction	8
1.1. Problem Context.....	9
1.2. Problem statement	9
1.3. The aims and objectives	9
1.4. Research Questions.....	10
1.5. Summary of results and contributions	10
1.6. Thesis Organization.....	10
Chapter 2	12
Literature Review	12
2.1. Introduction	12
2.2. Metacognition.....	13
2.2.1. Social Cognitive Theory	13
2.2.2. Metacognition Knowledge.....	14
2.2.3. Metacognitive monitoring.....	14
2.2.4. Metacognitive Control	15
2.3. Self-assessment.....	15
2.3.1. Planning	16
2.3.2. Monitoring	17
2.3.3. Evaluating	18
2.4. Conclusion	18
Chapter 3	19
Research method	19
3.1. Introduction	19
3.2. RESEARCH DESIGN.....	19
3.2.1. Define the target participants and select the sampling process.....	19
3.2.2. Task Preparation	20
3.2.3. Tools used	20
3.2.4. Preparation of Experiment Environment	20
3.2.5. Procedure	20

3.2.6. Develop and design self-assessment log	21
3.2.7. Collect data	22
3.2.8. Main Attributes	23
3.3. Summary.....	23
Chapter 4	23
Experiment Evaluation	24
4.1. Introduction	24
4.2. Calculating the attribute of individual developers.....	24
4.3. Assessing developers based on Attributes	25
4.3.1. Effect of self-assessment on Task completion	28
4.3.2. Effect of self-assessment on Repetitive mistakes	30
4.3.3. Types of repetitive mistakes	30
4.4. Research Findings.....	32
4.4.1. Research Questions Re-visited	32
Chapter 5	34
Conclusion.....	34
5.1. Overview	34
5.2. Review of objectives	34
5.3. Conclusion	34
