FINAL YEAR PROJECT REPORT

INVENTORY AND HUMAN RESOURCE MANAGEMENT SYSTEM

By

Madeeha Ijaz Mirza

Department of Computer and Engineering

Bahria University Karachi

2007

ACKNOWLEDGMENT

First of all I, Madeeha Mirza would like to thank Allah for all his blessings that he bestowed upon me, not just during the making of this project but throughout my life wherever I faced problems, without whom it wouldn't have been possible. This report was part of the requirements of our final year project at Bahria University Karachi. Several people have been instrumental in allowing this project to reach completion and that too within the time given. I would like express my sincere appreciation to my advisor Prof. Mohammad Faisal for his supervision, guidance, support and encouragement through out the course of the project.

I would also wish to thank the Director Bahria University, Capt(R). Ashfaq Agha and the Head of the Department (Computer Science) Prof. Shakeel Khoja, for facilitating us and providing us with ample resources to aid us in our project development. We would also like to appreciate and express our gratitude to Dr. Bilal Alvi for his concerns, support and encouragement at all times.

Last but not the least; I would like to thank Eternal Trading Group (Liansu) for giving me an opportunity to work for them and develop software that would suit their requirements and help them in managing their work in a better way and grow as a company. It was a pleasure working with them, this not only gave a chance to complete my project but also to learn a lot of new things which I had never explored before.

ABSTRACT

I present an inventory and human resource management software that is one of the important factors of any company today. My software is an application suited to the requirements of Eternal Trading Group (Liansu). The application is targeted for the controlling of inventory and employees of the company. The purpose of the project is to facilitate the company with an automated, sophisticated, speedy and computerized system so that the organization can be best fitted in this competitive business world.

The software helps in keeping track of customers, the bills to be sent to them and other such details. This software has features like automatic generated invoices and updating the stock, software that would meet their business needs.

The whole system development methodology has been described in this report. A system has been developed, a solution which has already replaced the old manual system. The system is developed by using MS SQL Server as back-end and .Net and HTML as front-end. Some sample source codes, screen outputs and reports are provided in the report.

This report provides the relevant details of the software, a fully integrated billing platform that generates records for employees and stock by collecting and correlating all details derived from the information entered.

TABLE OF CONTENTS

INTRODUCTION 3

1.1 ORGANIZATIONS INTRODUCTION 4
1.2 APPLICATION OVERVIEW 5
1.3 APPLICATIONS CONCENTRATED AREAS 6

BACKGROUND AND LITERATURE REVIEW 6

2.1 HISTORY 7
2.2 WORKING SCENARIO 8
2.3 REASONS FOR HRMS 12
2.4 FUNCTIONALITY OF HRMS 12
2.5 REASONS FOR INVENTORIES 14
2.6 FUNCTIONAL ROLES OF INVENTORY 14
2.7 INVENTORY MEASURES 14
2.8 INVENTORY COSTS 16
2.9 MYTHS AND REALITIES OF INVENTORY 16
2.10 PAYROLL CYCLE ACTIVITIES 18
2.10.1 Update Payroll Master File 18
2.10.2 Update tax rates and deductions 19
2.10.3 Validate time and attendance data 20
2.10.4 Prepare Payroll 23
2.10.5 Disburse Payroll 24

AIM & STATEMENT OF PROBLEM 26

3.2 MODULE 1- HRMS- RECORDS AND FINANCIALS 26
3.3 MODULE 2- PURCHASE, MAIN INVENTORY AND SALES 27
3.3.1 System Features 28
3.3.1.1 Problem 29
3.4 DEVELOPMENT PLAN OVERVIEW 29
3.4.1 Application Interface (Inventory and HRM software) 29

ANALYSIS AND DESIGN 32

4.1 HARDWARE CONFIGURATION 32
4.2 SOFTWARE FEATURES ANALYSIS AND DESIGN 32
