January 2018

# Abstract

A web and android based application which will introduce new concept in online grocery business in Islamabad which will provide customer satisfaction by making it possible for organization to deliver fresh dairy, fruits and vegetables. The project focuses on concept of just in time inventory and real-time supply chain by using advance technology which has functionality to cater the trend of this modern era. The proposed system will not only benefit the business itself but also customers which don't have access to pure and fresh food products at affordable rates by taking out the middle men. The resulting product will introduce a mechanism in delivery domain which will help in reducing managerial and warehousing cost.
