ACKNOWLEDGEMENTS

ABSTRACT

We would like to thank everyone who had contributed to the successful completion of this project. We would like to express my gratitude to my research supervisor, **Engr. Muhammad Khalid** for his invaluable advice, guidance and his enormous patience throughout the development of the research.

In addition, we would also like to express my gratitude to our loving parent and friends who had helped and given us encouragement.

CNC PCB ENGRAVING AND DRILLING MACHINE

ABSTRACT

Due to the rapid growth of technology the usage & utilization of CNC machine in industries are increased. The fabrication of low cost CNC machine is used to reduce cost and complexity of machine. This paper deals with the engraving of automatic CNC machine for PCB engraving and drilling. The Idea behind our project is to engrave and drill PCB based on low cost CNC system the lower cost is achieved by incorporating features of PC with CNC controller card. We have use an G code for whole system operation G code is nothing but a language in which people tell computerized machine tools 'How to make something'. The How is defined by instructions on where to move & how fast to move. Key Words: CNC, CNC card, motor drivers, stepper motors, power supply, spindle.

The drawings shall be generated on standard platforms with fixed limits. The application software analyses the drawing, which then extracts the coordinates and sends in the form of specific command through the serial/USB port.

The system then controls the stepper motors to achieve the required movement and the desired position. Gantry type arrangement is used to assist motors for movement in X, Y and Z direction (3-Dimensional).

The backbone of the system is a cleverly designed but equally simple mechanical assembly, resulting in great accuracy.

The project includes significant study of design principles and technical details of the CNC machine aimed for best performance.

CHAPTER

1	INTRODUCTION	1
1.1	Background	1
1.2	Problem Statements	3
1.3	Aims and Objectives	4
	1.3.1 Aims	4
	1.3.2 Objectives	5
1.4	Scope of Project	5
2	LITERATURE REVIEW	6
2.1	The CNC Process	6
2.2	Motor Driver	6
2.3	CNC Interface Card	7
2.4	Power Supplies	8
2.5	Axis and Motion Nomenclature	9
	2.5.1 Cartesian Coordinates Systems	9
3	DESIGN AND METHODOLOGY	10
3.1	CNC Linear Slide and Its Components	10

3.1.1	Features of CNC Linear Slide	10
3.1.2	Flexible Coupling	11
3.1.2.1	Characteristics	12
3.1.3	Linear Slide Bearing	13
3.1.3.1	Material Used for Ball Bearing	13
3.1.4	Lead Screw Engineering	13
3.2	Power Screws	14
3.2.1	Terminology of Lead Screw Systems	15
3.2.2	Lead Screws	17
3.2.2.1	Advantages	17
3.2.2.2	Disadvantages	17
3.2.3	Calculations of Lead Screw System	18
3.2.4	Force Calculations on Lead Screw	18
3.2.4.1	Torque Calculations	20
3.2.5	Selecting and Sizing Screw Drive Systems	21
3.2.5.1	Maximum Speed	22
3.2.5.2	Rotational Equation of Weight	23
3.2.5.3	Inertia of Lead Screw	23
3.3	Comparison between Stepper and Servo Motors	24
3.3.1	Working Principle of Stepper Motor	25
3.3.2	Types of Stepper Motor	25
3.3.2.1	Permanent Magnet Stepper	25
3.3.2.2	Variable Reluctance stepper	27
3.3.2.3	Hybrid Stepper	28
3.4	Stepping Modes	30
3.4.1	Wave drive	30
3.4.2	Full Drive	30
3.4.3	Half Drive	31
4	IMPLEMENTATION	32
4.1	Drive Technology for Motion Control	32
4.1.1	Driver	33
4.2	Motors Connection	34
4.2.1	Connections with Motors	34
4.3	Precaution for Installation	36
4.4	Eagle	36
4.4.1	Features	36
4.4.2	Easy to Use Schematic	36
4.4.3	Powerful PCB Layout	37
4.5	Interfacing	37
4.6	Introduction of Parallel Port	37
4.6.1	Parallel Port Modes	38
4.6.2	Hardware	38
4.6.3	Parallel Port Registers	39

	4.6.4	Parallel Port Interfacing of Machine Using Mach3	39
