FINAL YEAR PROJECT REPORT

**ONLINE FIR AND CRIMINAL
INFORMATION SYSTEM**

In fulfillment of the requirement
For degree of
BS (COMPUTER SCIENCES)

WAJID ALI	35717 BSCS

SUPERVISED BY

MR. TANVEER ZAHID KHAN

BAHRIA UNIVERSITY (KARACHI CAMPUS)

May 2017

ACKNOWLEDGEMENTS

We would like to thank everyone who had contributed to the successful completion of this project. We would like to express our gratitude to our research supervisor, Mr Tanveer Zahid Khan for his invaluable advice, guidance and his enormous patience throughout the development of the research(project).

In addition, We would also like to express our gratitude to our loving parents and friends who had helped and given us encouragement.

ONLINE FIR AND CRIMINAL INFORMATION SYSTEM

ABSTRACT

The objective of this project is to create a web application for the submission of FIR's and tracking the criminal record. This report gives the description in detail of all the phases which are involved in throughout the lifecycle of the project. Each Phase involves parallel stages of different processes like Initial Planning, Analysis and Designing, Implementation of design work, Testing of Implemented work and finally the outcome seems as the deliverable feature of Phase. Finally the end product of the algorithms written in php language and the application will be known as online FIR and criminal information system.

Our system will automate the police stations of Pakistan. It will be used to manage the centralized online FIR, criminal's proceedings, criminal's crime historical information throughout the country in all police stations. This system will also manage criminal's information with their biometric and picture details. Through this system, criminal's data throughout Pakistan will be available in all police stations and it will help the police to find track record of a criminal anywhere in the country. Our system will also help the victim by sending the address of nearest police station and notification to nearest police station about his/her FIR.

Right now, most FIR systems are manual. In some province, online system is implement but it's a province base system and records are not available in another province so it's very difficult to trace criminal of one province in another province.

With the implementation of this system the crime rate will be minimized and it will also save time and cost. All the information will be stored centrally so it will be easy for any police station to track the record of any criminal or FIR.

CHAPTER

1	INTRODUCTION	14
	1.1 Background	14
	1.2 Problem Statements	15
	1.3 Aims and Objectives	15
	1.4 Scope of Project	15
2	LITERATURE REVIEW	18
	2.1 Online FIR	18
	2.2 Criminal Information System (CIS)	19
	2.3 Technology Used:	20
2.3.1	Verification Code:	21
2.3.2	Address of nearest Police station:	21
2.3.3	Centralized Database:	21
2.3.4	Ease of Access:	21
	2.4 Related Work	22

3	DESIGN AND METHODOLOGY	24
	3.1 Agile System Development Life Cycle	24
3.1.1	Precision	25
3.1.2	Exploration Phase	26
3.1.3	Iteration Planning	26
3.1.4	Analysis, Design, Coding And Testing Phase	27
3.1.5	Release Phase	27
3.1.6	Interactivity	28
	3.2 Data gathering and Initial Requirements	28
	3.3 Use case	28
3.3.1	Use Case	29
3.3.2	Application Flow Diagram	30
3.3.3	Context Diagram	32
3.3.4	Sequence Diagram	33
3.3.5	Structural Diagram	34
	3.4 Customer Evaluation	35
	3.5 GUI of Application	36
3	IMPLMENTATION	40
	4.1 Components in Project	40
	4.1.1 Victim Sign in & Sign up	40
	4.1.3 Validation Techniques	42
	RESULTS AND DISCUSSIONS	45
	5.1 Testing	45
	5.2 Types of testing	46
	5.3 Test Cases	47
	CONCLUSION AND RECOMMENDATIONS	50
	6.1 Conclusion	50
	6.2 Future Work	51
