## **ACKNOWLEDGEMENTS**

In the name of Almighty Allah, the most Grateful, Merciful and too blessings of the last Prophet Hazrat Muhammad (P. B. U. H.). We have completed the final report of thesis with the help of Allah.

First, we would like to express our gratitude to our supervisor Mr. Muhammad Fahad Mahmood for the support of our Bachelor's thesis, for his patience, motivation, Excellency, supervision and vast knowledge. He guided us at every point during the thesis work.

Besides our advisor, we would like to thank our colleagues, seniors and teachers for their help, motivation and support and comments. We appreciate their advices, guidance when we were ambushed by the technicalities of the project.

We also want to thank our family especially to our parents for their motivation, encouragement and endless love for supporting in all spheres of life to make us technical and educated men that affected me very much. We thank our parents for their help and support to complete our thesis draft.

## ABSTRACT

The study area for this thesis is Missa Kaswal, Gujar Khan, Punjab. The coordinates of the area are  $32^{\circ}$  N to  $34^{\circ}$  N latitude and  $70^{\circ}$  E to  $74^{\circ}$  E longitude. This area lies in Rawalpindi district, so the climate is similar to Rawalpindi. Oil wells are drilled in Rajian and these wells are at production stage. Rajian is about 80 kilometers south of Islamabad, capital of Pakistan. It lies in the Potwar plateau that is present in Potwar sub-Indus Basin. In this course, we were given five seismic lines of Missa Kaswal; one is strike line and other four are dip lines, and the strike line is also cutting all the four dip lines through the center. One well log data of Rajian 01 also provided. As the well is drilled on the strike line, we have the advantage that the strike line is also the control line and we can easily correlate the data. Rajian is tectonically very compressed area as it is present between Main Boundary Thrust and Salt Range Thrust Fault. It is also surrounded by Kalabagh fault and Jhelum fault. This area is deformed and the traps are mostly structural traps i.e. anticlines, faults, pop-ups etc. The stratigraphy of the area is till Khewra Sandstone (Cambrian age), but every formation cannot be the reservoir. We have studied four possible extractable reservoirs; Khewra Sandstone, Chorgali Formation, and Sakesar Limestone. The best possible reservoir among these formations is Khewra Sandstone that consists of sandstone that has primary porosity and also has the best porosity percentage of up to 15 percent. Different procedures for finding hydrocarbon bearing zone were performed in this project, starting from time-depth charts to the correlation of well logs data and the seismic interpretation to find best reservoirs in this area. Five well log data are analyzed to refine the process for finding hydrocarbons including Caliper log, Spontaneous Potential log, Gamma ray log, Sonic log, Neutron log and resistivity log. With the help of these data, we interpreted Khewra Sandstone as the best reservoir of this area.

## **CONTENTS**

ACKNOWLEDGEMENTS	i
ABSTRACT	ii
FIGURES	ix
TABLES	xii

### **CHAPTER 1**

#### **INTRODUCTION OF STUDY AREA**

1.1	Geological overview of the area	1
1.2	Location	2
1.3	Available resources	3
1.4	Base map	3
1.5	Well Data	4
1.6	Seismic lines	5
1.7	Climate	5
1.8	Objectives	6
1.9	Methodology	7

### **CHAPTER 2**

#### **TECTONICS OF POTWAR PLATEAU AREA**

1.1	Main Boundary Thrust Fault	8
1.2	Jhelum Thrust	8
1.3	Kalabagh Fault	9
1.4	Salt Range Thrust Fault	9

## **CHAPTER 3**

### **STRATIGRAPHY OF STUDY AREA**

3.1	Stratigraphy of Potwar Basin	10
3.2	Chorgali Formation	12
3.3	Sakesar Limestone	12
3.4	Lockhart Formation	13
3.5	Khewra Sandstone	14

## **CHAPTER 4**

### **PETROLEUM SYSTEM**

4.1	Introduction	15
4.2	Source rock	15
4.3	Oil migration	16
4.3.1	Primary migration	16
4.3.2	Secondary porosity	16
4.4	Reservoir rocks	16
4.5	Traps	17
4.5.1	Structural traps	17
4.5.2	Stratigraphic traps	17
4.5.3	Combination traps	18
4.5.4	Hydrodynamic Traps	19
4.6	Seal	19
4.7	Time	20

## **CHAPTER 5**

### **SEISMIC DATA ACQUISITION**

5.1	Introduction	21
5.2	Seismic Acquisition	22
5.2.1	Source and receiver spread geometry	22
5.2.2	Source	26
5.2.2.1	Impulsive sources	26
5.2.2.2	Non impulsive source	26
5.2.2.3	Source parameters	27
5.2.3	Receivers	27
5.2.4	Recording of Seismic Data	29
5.2.4.1	Recording Parameters	29
5.2.5	Seismic cables	29

## **CHAPTER 6**

### **SEISMIC DATA PROCESSING**

6.1	Introduction	31
6.2	Raw seismic data	32
6.3	Editing	33
6.4	Multiplexed data	33
6.5	Demultiplexed data	33
6.6	Filtering	34
6.7	Geometry Definition	34
6.8	Static Correction / Residual correction	34

6.9	Common depth point / Common Mid-Point	34
6.10	Deconvolution / Inverse Filtering	35
6.11	Velocity Analysis	35
6.12	Normal move out / Dynamic Correction	35
6.13	Amplitude gain control	36
6.14	Stacking	36
6.16	Migration	36

## **CHAPTER 7**

### **SEISMIC DATA INTERPRETATION**

7.1	Introduction	38
7.2	Seismic display and scale	38
7.2.1	Horizontal scale	39
7.2.2	Vertical scale	39
7.3	Base Map	39
7.4	Seismic Interpretation of Rajian Area	40
7.4.1	Control line Selection	41
7.4.1.1	Velocity window analysis on control line	41
7.4.1.2	Time Depth conversion plot	42
7.4.1.3	Horizon marking	44
7.4.1.4	Jump correlation	45
7.4.1.5	Time picking and TWT contour maps	48
7.4.1.6	Velocity picking and velocity contour maps	51
7.4.1.7	Depth calculation and depth contour maps	54

7.5	Fault interpretation	56
7.6	Hydrocarbon trap	57

## **CHAPTER 8**

### **PETROPHYSICAL ANALYSIS**

8.1	Introduction	58
8.2	Objectives	59
8.3	Types of well log	59
8.4	Petrophysical Interpretation of Rajian-01	60
8.4.1	Steps of Petrophysical Analysis	62
8.4.2	Marking the Zones of Interest	63
8.4.3	Calculation of volume of shale	72
8.4.4	Calculation of volume of sand	72
8.4.5	Calculation of bulk density	72
8.4.6	Calculation of neutron density	73
8.4.7	Calculation of average porosity	74
8.4.8	Calculation of effective porosity	74
8.4.9	Calculation of $R_w$	74
8.4.10	Calculation of true resistivity	75
8.4.11	Calculation of saturation of water ( $S_w$ )	75
8.4.12	Calculation of saturation of hydrocarbon ( $S_h$ )	76
8.5	Graphical representation	76
8.6	Results	83

CONCLUSIONS	84
REFERENCES	85
ANNEXURE	87
