## **ACKNOWLEDGEMENT**

All thanks and praises to ALLAH (SWT) for giving me this wonderful opportunity and enabling me to complete my Master's Degree. It took my 6 month to complete this work titled "Performance Analysis Of Islamic Banking With Conventional banking During Crisis Period (2007-2012)".during this period lots of people helped me in completion of this research work people helped me in completion of this thesis report. Many people have made possible and contributed to my work on this thesis in different ways. It is a pleasure to convey my gratitude to them all in my humble acknowledgment. I would like to mention the encouragement and support provided by my research supervisor, Mr. Shahzad Butt, which has served as a catalyst behind this work. Supposedly big issues got dissolved by his positive and encouraging attitude. I could not imagine having a better advisor and mentor. Last but not the least, I wish to express my gratitude to my beloved family and friends for their sincere prayers, support and continuous motivation throughout this arduous path, without their support this work could not have materialized at all.

## **ABSTRACT**

The purpose of this study is to observe and calculate the financial performance of both Islamic and conventional banks operating in Pakistan during 2013 to 2017 by using 12 financial ratios these ratios divided into 4 group. First we calculated the performance of both Islamic and conventional in term of profitability. Profitability ratios include return on equity (ROE), return on assets (ROA) and profit to expenses ratio (PER). The second group is liquidity, liquidity ratios include loan to deposit ratio (LDR), Loan to assets ratio (LAR) and cash and portfolio investment deposit ratio (CPIDR). Third group is risk and solvency ratios, risk and solvency ratios include Debt to equity (DER), deposit to total assets ratio (DTAR) and equity multiplier (EM). Fourth group is Efficiency ratios, efficiency ratios include assets utilization (AU), income to equity ratio (IER) and operating expenses (OE). The sample of 10 conventional banks and 10 Islamic banks was selected for measuring the financial performance of both Islamic and conventional banks. This study found that overall financial performance of conventional banks was better than the Islamic banks. The study also found that Islamic banks financial performance has been improving continuously over the years. The main reasons that the conventional banks are dominating in Pakistan are conventional banks have great experience of handling banking transactions and they also have larger share in the total banking assets of Pakistan. Islamic banks are relatively new in financial market of Pakistan as compared to conventional banks which are operating in Pakistan ever since the independence from British rule, hence they have comparative advantage over Islamic banks. This study also found that profitability and efficiency ratio of Islamic banks are less than conventional banks during 2013 to 2017. Their solvency and risk ratios showed that Islamic banks are more solvent and less risky as compared with conventional banks.

Key words Islamic banks, Conventional banks, Pakistan, Comparison
